

# TE0714 Test Board

## Table of contents

This example contains a simple MicroBlaze Design with an endless loop application printing "Hello Trenz Module TE0714" and setting the onBoard LED blink.

- 1.2 Revision History

Refer to <http://trencor.com/Products/TE0714> for the current online version of this manual and other available documentation.

- 1.4 Requirements
  - 1.4.1 Software
  - 1.4.2 Hardware

## Key Features

- 1.5 Content
  - 1.5.1 Design Sources
  - 1.5.2 Additional Sources
  - 1.5.3 Prebuilt
  - 1.5.4 Download

- 2 UART
- 3 Launch

- 3.1 Programming
  - 3.1.1 Get prebuilt boot binaries
  - 3.1.2 QSPI-Boot mode
  - 3.1.3 JTAG

- 3.2 Usage
  - 3.2.1 UART
  - 3.2.2 Vivado HW Manager

## Revision History

- 4 System Design - Vivado
  - 4.1 Block Design
  - 4.2 Constraints

- 5 Software Design - Vitis
  - 5.1 Application
    - 5.1.1 Hello TE0714

- 6 Additional Software
- 7 App. A: Change History and Legal Notices
  - 7.1 Document Change History
  - 7.2 Legal Notices

- 7.3 Data Privacy
- 7.4 Document Warranty
- 7.5 Limitation of Liability
- 7.6 Copyright Notice
- 7.7 Technology Licenses
- 7.8 Environmental Protection
- 7.9 REACH, RoHS and WEEE

- 8 Table of contents

Design Revision History

## Release Notes and Know Issues

Issues	Description	Workaround	To be fixed version
--------	-------------	------------	---------------------

No known issues	---	---	---
-----------------	-----	-----	-----

#### Known Issues

## Requirements

### Software

Software	Version	Note
Vitis	2021.2	needed, Vivado is included into Vitis installation

#### Software

### Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#).

Complete List is available on "<project folder>\board\_files\\*\_board\_files.csv"

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EMMC	Others	Notes
TE0714-02-35-2I	35_2i	REV02	---	16MB	---	---	3.3V qspi flash
TE0714-02-35-2IC6	35_2ic6	REV02	---	16MB	---	---	1.8V qspi flash
TE0714-02-50-2I	50_2i	REV02	---	16MB	---	---	3.3V qspi flash
TE0714-02-50-2IC6	50_2ic6	REV02	---	16MB	---	---	1.8V qspi flash
TE0714-03-35-2I	35_2i	REV03	---	16MB	---	---	3.3V qspi flash
TE0714-03-35-2I3	35_2i	REV03	---	16MB	---	---	3.3V qspi flash
TE0714-03-35-2IC7	35_2i	REV03	---	16MB	---	---	3.3V qspi flash
TE0714-03-50-2I	50_2i	REV03	---	16MB	---	---	3.3V qspi flash
TE0714-03-50-2IAC6	50_2iac6	REV03	---	16MB	---	---	1.8V qspi flash
TE0714-03-S007	50_2i	REV03	---	16MB	---	---	3.3V qspi flash
TE0714-04-42I-7-B	35_2i	REV04	---	16MB	---	---	3.3V qspi flash
TE0714-04-52I-7-B*	50_2i	REV04	---	16MB	---	---	3.3V qspi flash
TE0714-04-42I-7-C	35_2i	REV04	---	16MB	---	---	3.3V qspi flash

\* used as reference

#### Hardware Modules

Design supports following carriers:

Carrier Model	Notes
TEBA0714-01*	

\*used as reference

#### Hardware Carrier

Additional HW Requirements:

Additional Hardware	Notes
USB Cable for JTAG/UART	Check Carrier Board and Programmer for correct type
XMOD Programmer	Carrier Board dependent, only if carrier has no own FTDI

\*used as reference

#### Additional Hardware

## Content

For general structure and usage of the reference design, see [Project Delivery - AMD devices](#)

## Design Sources

Type	Location	Notes
Vivado	<project folder>\block_design <project folder>\constraints <project folder>\ip_lib <project folder>\board_files	Vivado Project will be generated by TE Scripts
Vitis	<project folder>\sw_lib	Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation

#### Design sources

## Additional Sources

Type	Location	Notes
---	---	---

#### Additional design sources

## Prebuilt

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface

Hardware-Platform-Description-File	*.xsa	Exported Vivado <a href="#">hardware description file</a> for Vitis and PetaLinux
LabTools Project-File	*.lpr	Vivado Labtools Project File
MCS-File	*.mcs	Flash Configuration File with Boot-Image (MicroBlaze or FPGA part only)
MMI-File	*.mmi	File with BRAM-Location to generate MCS or BIT-File with *.elf content (MicroBlaze only)
Software-Application-File	*.elf	Software Application for Zynq or MicroBlaze Processor Systems

Prebuilt files (only on ZIP with prebuilt content)

## Download

Reference Design is only usable with the specified Vivado/Vitis version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TE0714 "Test Board" Reference Design](#)

## Design Flow

Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first launch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [AMD Development Tools#XilinxSoftware-BasicUserGuides](#)
- [Vivado Projects - TE Reference Design](#)
- [Project Delivery.](#)

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "\_create\_win\_setup.cmd" on Windows OS and "\_create\_linux\_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also executed by Xilinx Vivado/Vitis GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)

**Caution!** Win OS has a 260 character limit for path lengths which can affect the Vivado tools. To avoid this issue, use Virtual Drive or the shortest possible names and directory locations for the reference design (for example "x:\<project folder>")

1. Run \_create\_win\_setup.cmd/\_create\_linux\_setup.sh and follow instructions on shell:

#### `_create_win_setup.cmd/_create_linux_setup.sh`

```
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: <absolute project path>
-----
-----TE Reference
Design-----
-----
-- (0) Module selection guide, project creation...prebuilt export...
-- (1) Create minimum setup of CMD-Files and exit Batch
-- (2) Create maximum setup of CMD-Files and exit Batch
-- (3) (internal only) Dev
-- (4) (internal only) Prod
-- (c) Go to CMD-File Generation (Manual setup)
-- (d) Go to Documentation (Web Documentation)
-- (g) Install Board Files from Xilinx Board Store (beta)
-- (a) Start design with unsupported Vivado Version (beta)
-- (x) Exit Batch (nothing is done!)
-----
Select (ex.: '0' for module selection guide):
```

2. Press 0 and enter to start "Module Selection Guide"
3. Create project and follow instructions of the product selection guide, settings file will be configured automatically during this process.
  - optional for manual changes: Select correct device and Xilinx install path on "design\_basic\_settings.cmd" and create Vivado project with "vivado\_create\_project\_gui mode.cmd"

Note: Select correct one, see also [Vivado Board Part Flow](#)

4. Create hardware description file (.xsa file) for PetaLinux project and export to prebuilt folder

**run on Vivado TCL (Script generates design and export files into "<project folder>\prebuilt\hardware\<short name>")**

```
TE::hw_build_design -export_prebuilt
```

Using Vivado GUI is the same, except file export to prebuilt folder.

5. Generate Programming Files with Vitis
  - a. Run on Vivado TCL:

**Script generates applications and bootable files, which are defined in "sw\_lib\apps\_list.csv"**

```
TE::sw_run_vitis -all
```

- b. The newly built application "\prebuilt\software\<short name>\hello\_te0714.elf" gets copied into "\firmware\microblaze\_0\"

- c. Regenerate Vivado Project or Update Bitfile only, with new "hello\_te0714.elf"

TCL scripts generate also platform project, this must be done manually in case GUI is used. See [Vitis](#)

## Launch

## Programming

Check Module and Carrier TRMs for proper HW configuration before you try any design.

Reference Design is also available with prebuilt files. It's recommended to use TE prebuilt files for first launch.

Xilinx documentation for programming and debugging: [Vivado/Vitis/SDSoC-Xilinx Software Programming and Debugging](#)

## Get prebuilt boot binaries

1. Run `_create_win_setup.cmd/_create_linux_setup.sh` and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
  - a. Select assembly version
  - b. Validate selection
  - c. Select create and open delivery binary folder

Note: Folder "<project folder>\\_binaries\_<Article Name>" with subfolder "boot\_<app name>" for different applications will be generated

## QSPI-Boot mode

1. Connect JTAG and power on carrier with module
2. Open Vivado Project with "vivado\_open\_existing\_project\_gui mode.cmd" or if not created, create with "vivado\_create\_project\_gui mode.cmd"

**run on Vivado TCL (Script programs BOOT.bin on QSPI flash)**

```
TE::pr_program_flash -swapp hello_te0714
```

3. Power your Board OFF and ON to start the application and see the output in the console

## JTAG

Not used on this example.

## Usage

1. Prepare HW like described on section [Programming](#)
2. Connect UART USB (most cases same as JTAG)
3. Select QSPI as Boot Mode

Note: See TRM of the Carrier, which is used.

#### 4. Power On PCB

1. FPGA Loads Bitfile from Flash
2. hello\_te0714.elf application starts on MicroBlaze
3. Hello Trenz will be printed on UART console

info: Do not reboot, if Bitfile programming over JTAG is used as programming method.

##### a. UART

Open Serial Console (e.g. putty)

- i. Speed: 9600
- ii. COM Port: Win OS, see device manager, Linux OS see `dmesg |grep tty` (UART is \*USB1)

COM18 - PuTTY

```
Hello Trenz Module TE0714 (Loop: 36)
MGT_CLOCK_1: 124.995 MHz
system_clock: 25. 0 MHz
Hello Trenz Module TE0714 (Loop: 37)
Hello Trenz Module TE0714 (Loop: 38)
```

## Vivado HW Manager

- Open Vivado HW Manager
- Add VIO to Dashboard
- Set Radix to unsigned integer for FMeterCLKs (fm\_\*). Note: Measurement is not accurate!
- Control:
  1. system Reset
  2. Enable MGT Power & Clock

## System Design - Vivado

## Block Design

#### **\_i\_bitgen\_common18.xdc**

```
set_property CONFIG_VOLTAGE 1.8 [current_design]  
set_property CFGBVS GND [current_design]
```

For 3.3V variants:

#### **\_i\_bitgen\_common33.xdc**

```
set_property CONFIG_VOLTAGE 3.3 [current_design]  
set_property CFGBVS VCCO [current_design]
```

## **Design specific constraints**

All others IOs are constraint in the Board Files.

## **Software Design - Vitis**

---

For Vitis project creation, follow instructions from:

[Vitis](#)

## **Application**

Template location: "<project folder>\sw\_lib\sw\_apps\"

### **Hello TE0714**

Trenz Hello World example and frequency read as endless loop

Template location: \sw\_lib\sw\_apps\hello\_te0714

The printed Text and the blinking of the red LED can be modified

## **Additional Software**

---

No additional software is needed.

## **App. A: Change History and Legal Notices**

---

Document Warranty

The material contained in this document is provided "as is" and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

## Limitation of Liability

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

## Copyright Notice

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

## Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

## Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

## REACH, RoHS and WEEE

### REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#). The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#) are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#).

### RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

### WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.

#### **Error rendering macro 'page-info'**
