Overview

Trenz Electronic TE0712 is an industrial-grade FPGA module integrating a Xilinx Artix-7 FPGA, a 10/100 Mbit Ethernet transceiver, 1 GByte of DDR3 SDRAM, 32 MByte Flash memory for configuration and operation, and powerful switching-mode power supplies for all on-board voltages. Numerous configurable I/Os are provided via rugged high-speed strips. All this on a tiny footprint, smaller than a credit card size at very competitive price. All Trenz Electronic SoMs in 4 x 5 cm form factor are mechanically compatible.

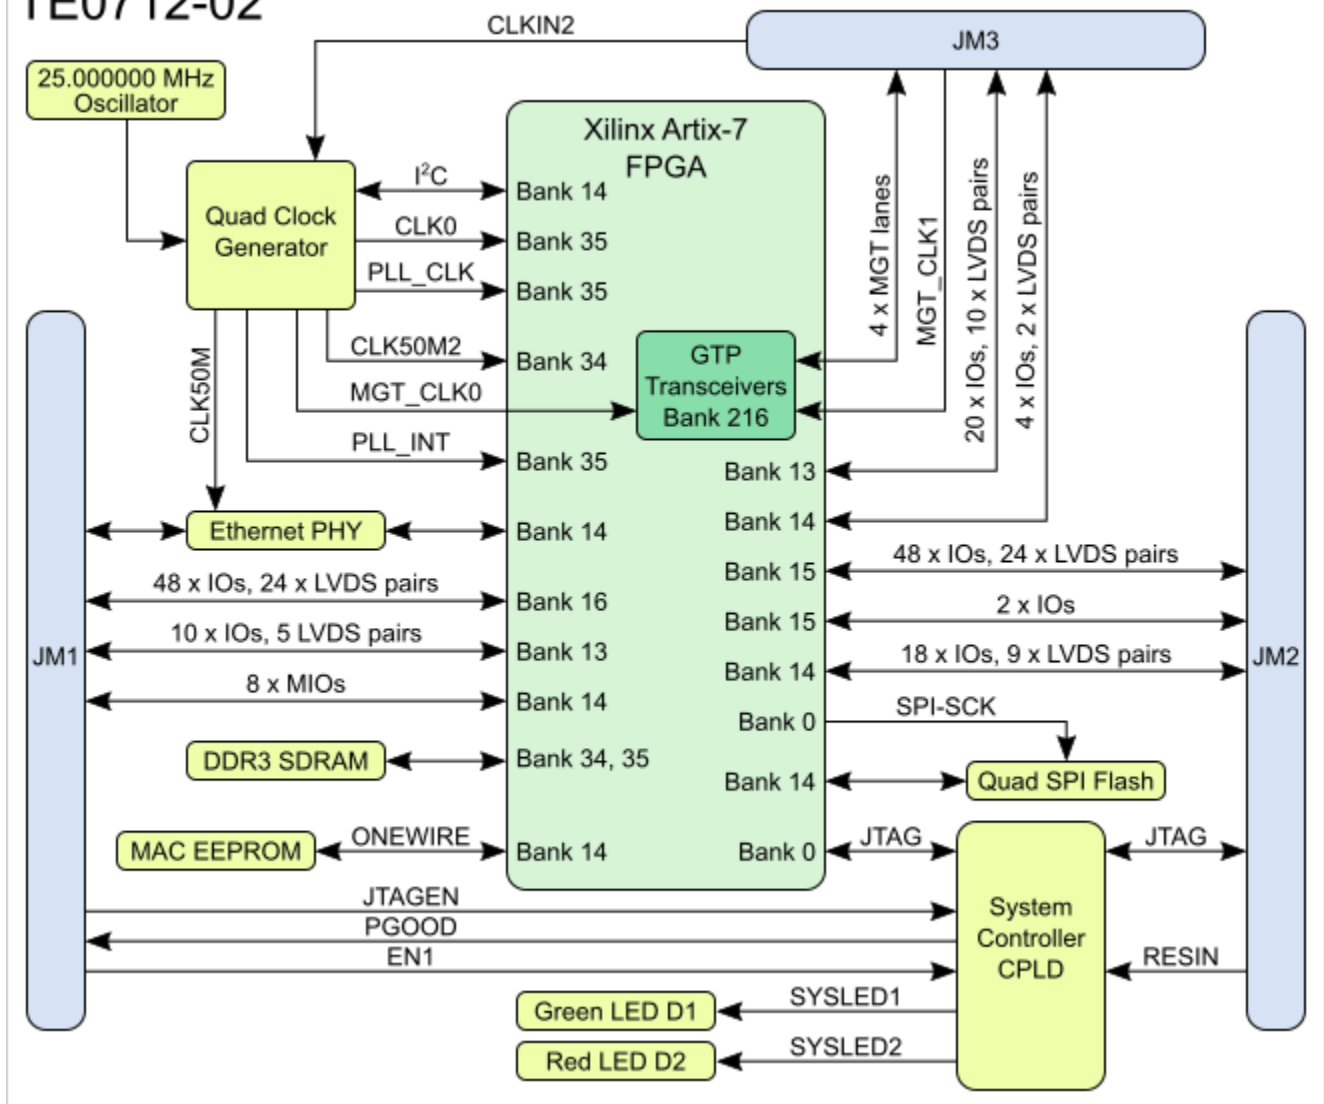

Key Features

- Xilinx Artix-7 FPGA (15T to 200T) supported by the free [Xilinx Vivado WebPACK](#) software
- Both industrial and commercial temperature ranges available
- Rugged for high shock resistance and high vibration
- 1 GByte DDR3 32-bit SDRAM
- 10/100 Mbit Ethernet PHY
 - MAC address EEPROM
- 32 MByte QSPI Flash memory (with XiP support)
- Programmable clock generator
 - Transceiver clock (default 125 MHz)
 - Fabric clock (default 200 MHz)
- Plug-on module with 2 × 100-pin and 1 × 60-pin high-speed hermaphroditic strips
- 158 FPGA I/Os (78 differential pairs) available via board-to-board connectors (quantity depends on assembly variant)
- 4 GTP (high-performance transceiver) lanes
 - GTP (high-performance transceiver) clock input
- On-board high-efficiency DC-DC converters
 - 12A x 1.0V power rail
 - 1.5A x 1.8V power rail
 - 1.5A x 1.5V power rail
- System management and power sequencing
- eFUSE bit-stream encryption
- AES bit-stream encryption
- User configurable LEDs
- Evenly-spread supply pins for good signal integrity

Additional assembly options are available for cost or performance optimization upon request.

Block Diagram

TE0712-02

Main Components

1. Programmable oscillator @25 MHz, SiTime SiT8008, U9
2. Programmable quad clock generator, Silicon Labs Si5338, U2
3. 10/100 Mbps Ethernet PHY transceiver, Texas Instruments TLK106, U5
4. Xilinx Artix-7 FPGA XC7A series, U1
5. 32 MByte QSPI Flash memory, Cypress S25FL256S, U4
6. 4 Gbit DDR3 SDRAM, Intelligent Memory IM4G16D3EABG, U15
7. System Controller CPLD, Lattice Semiconductor MachXO2-256HC, U3
8. 4 Gbit DDR3 SDRAM, Intelligent Memory IM4G16D3EABG, U19
9. Serial EEPROM, Microchip 11AA02E48, U7
10. Samtec Razor Beam™ LSHM-150 B2B connector, JM2
11. Samtec Razor Beam™ LSHM-150 B2B connector, JM1
12. Samtec Razor Beam™ LSHM-150 B2B connector, JM3
13. 12A Enpirion EN63A0QI PowerSoC DC-DC converter, U14
14. Green LED (SYSLED1), D1
15. Red LED (SYSLED2), D2

Initial Delivery State

Programmable unit	Content	Notes
Xilinx Artix-7 FPGA	Not programmed	U1
System Controller CPLD	Programmed	U3
SPI Flash OTP area	Empty	U4
SPI Flash main array	Empty	U4
SPI Flash Quad Enable bit	Set	U4
Microchip 11AA02E48	Globally unique EUI-48 (Ethernet MAC address)	U7
Programmable quad clock generator, Silicon Labs Si5338	Programmed, CLK1A - 50M, CLK2 - 125M, CLK3 - 50M	U2

Signals, Interfaces and Pins

Board to Board (B2B) I/Os

FPGA bank number and number of I/O signals connected to the B2B connector:

FPGA Bank	B2B Connector	I/O Signal Count	Voltage Level	Notes
13	JM1	10	VCCIO13	Supplied by the baseboard. Not available on XC7A35T assembly variant.
13	JM3	20	VCCIO13	Supplied by the baseboard. Not available on XC7A35T assembly variant.
14	JM1	8	3.3V	
14	JM2	18	3.3V	
14	JM3	4	3.3V	
15	JM2	48	VCCIO15	Supplied by the baseboard.
15	JM2	2	VCCIO15	Supplied by the baseboard.
16	JM1	48	VCCIO16	Supplied by the baseboard.

Please refer to the [Pin-out](#) tables page for additional information.

JTAG Interface

JTAG access to the Xilinx Artix-7 FPGA and System Controller CPLD devices is provided through B2B connector JM2.

JTAG Signal	B2B Pin
TMS	JM2-93
TDI	JM2-95
TDO	JM2-97
TCK	JM2-99

JTAGEN pin in B2B connector JM1 is used to select JTAG access for FPGA or SC CPLD:

JTAGEN	JTAG Access To
Low	Artix-7 FPGA
High	System Controller CPLD

System Controller I/O Pins

Special purpose pins are connected to System Controller CPLD and have following default configuration:

Pin Name	Mode	Function	Default Configuration
PGOOD	INOUT	Power good	Active low when EN1 is low or module power is invalid otherwise high impedance
JTAGEN	Input	JTAG select	Low for normal operation, high for System Controller CPLD access.
EN1	Input	Power Enable	When forced low, pulls POR_B low to emulate power on reset.
NOSEQ	-	No function	Not used.
MODE	-	No function	Not used.

Purpose of this IOs depends in the CPLD Firmware, please check also CPLD Firmware description, see: [TE0712 CPLD](#)

On-board LEDs

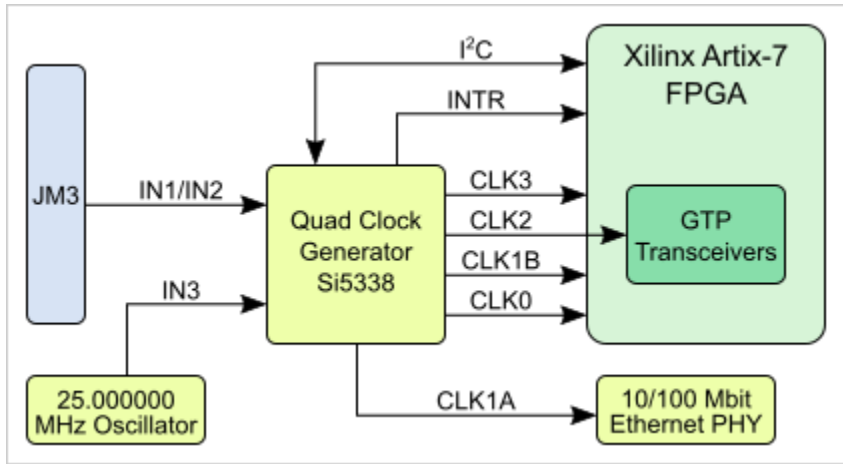

The TE0712 module has 2 LEDs which are connected to the System Controller CPLD. Once FPGA configuration has completed these can be used by the user's design.

LED	Color	SC Signal	SC Pin	Notes
D1	Green	SYSLED1	9	Exact function depends on System Controller CPLD firmware.
D2	Red	SYSLED2	8	Exact function depends on System Controller CPLD firmware.

Clocking

Si5338 programmable clock generator is used to generate different clocks with 25 MHz oscillator connected to pin IN3. The Si5338 can alternatively be clocked using pins IN1 and IN2 which are connected to B2B connector JM3 (CLKIN2).

The Si5338 can be programmed to change the output frequency of the FPGA clocks (the Ethernet clock must remain at 50 MHz). An I²C bus is connected between the FPGA (master) and clock generator (slave). Proper logic needs to be created in the FPGA to exercise the I²C bus with the correct data. See the reference design section for more information.

CLK Output	FPGA Bank	FPGA Pin	IO Standard	Net Name	Default Frequency REV 01, REV 02	Default Frequency REV 03 and higher	Notes
CLK0	35	K4/J4	DIFF_SSTL15	CLK0_P/N	Off	100MHz LVDS18	NB! Since PCB REV02.
CLK1A	-	-		CLK50M	50 MHz	50MHz CMOS33	PHY chip RMII reference clock.
CLK1B	34	R4		CLK50M2	Off	50MHz CMOS33	NB! Since PCB REV02.
CLK2	216	F6/E6	Auto	MGT_CLK0_P/N	125 MHz	125MHz LVDS18	GTP transceiver clock.
CLK3	35	H4/G4	DIFF_SSTL15	PLL_CLK_P/N	50 MHz	50MHz LVDS18	

Certain B2B connector pins are connected to the FPGA pins which are capable of handling clocking signals from the user's PCB (baseboard). See schematics B2B page for additional information.

On-board Peripherals

32 MByte Quad SPI Flash Memory

On-board QSPI flash memory S25FL256S (U14) is used to store initial FPGA configuration. Besides FPGA configuration, remaining free flash memory can be used for user application and data storage. All four SPI data lines are connected to the FPGA allowing x1, x2 or x4 data bus widths. Maximum data rate depends on the selected bus width and clock frequency used.

 SPI Flash QE (Quad Enable) bit must be set to high or FPGA is unable to load its configuration from flash during power-on. By default this bit is set to high at the manufacturing plant.

System Controller CPLD

System Controller CPLD (Lattice MachXO2-256HC, U3) is used to control FPGA configuration process. The FPGA is held in reset (by driving the PROG_B signal low) until all power supplies have stabilized.

By driving signal RESIN to low you can reset the FPGA. This signal can be driven from the user's baseboard PCB via the B2B connector JM2 pin 18.

Input EN1 is also gated to FPGA reset, should be open or pulled up for normal operation. By driving EN1 low, on-board DC-DC converters will be not turned off.

User can create their own System Controller design using [Lattice Diamond](#) software. Once created it can be programmed into CPLD via JTAG interface.

DDR3 SDRAM

The TE0712-02 SoM has two 4 Gbit volatile DDR3 SDRAM ICs (U15 and U19) for storing user application code and data.

- Part number: IM4G16D3FABG-125I
- Supply voltage: 1.5V
- Organization: 32M words x 16 bits x 8 banks
- Memory speed: limited by Xilinx Artix-7 speed grade and MIG

Configuration of the DDR3 memory controller in the FPGA should be done using the MIG tool in the Xilinx Vivado Design Suite IP catalog.

Ethernet PHY

The 10/100 Mbps Ethernet PHY TLK106 (U5) by Texas Instruments is connected to the FPGA bank 14 using Reduced Media Independent Interface standard (RMII). The RMII standard has reduced set of data lines (two rather than four) and a higher clock frequency (50 MHz rather than 25 MHz) compared to the Media Independent Interface standard (MII). A management interface is also available allowing access to registers in the PHY chip. Transmit and receive signals are connected to the B2B connector JM1. The magnetics and RJ-45 jack must be placed on the user's PCB (baseboard).

FPGA Ethernet Signals

FPGA Pin	Signal Name	Signal Description
N17	ETH-RST	Ethernet reset, active-low.
N15	LINK_LED	Ethernet LED pin indication mode: in mode 1 - LINK, in mode 2 - ACT.
R16	MDC	Ethernet management clock.
P17	MDIO	Ethernet management data.
P14	ETH_TX_D0	Ethernet transmit data 0. Output to Ethernet PHY.
P15	ETH_TX_D1	Ethernet transmit data 1. Output to Ethernet PHY.
R14	ETH_TX_EN	Ethernet transmit enable.
N13	ETH_RX_D0	Ethernet receive data 0. Input from Ethernet PHY.
N14	ETH_RX_D1	Ethernet receive data 0. Input from Ethernet PHY.

P20	ETH_RX_DV	Ethernet receive data valid.
-----	-----------	------------------------------

All signals are connected to the FPGA bank 14 and correspond to LVCMOS33 standard.

MAC Address EEPROM

TE0712-02 module has a 2 Kbit Serial Electrically Erasable PROM (EEPROM, U7). It provides pre-programmed 48-bit Extended Unique Identifier (EUI-48™) to identify network hardware MAC address which is write-protected to ensure tamper-proof designs. This SEEPROM can be accessed by UNI/O® serial interface bus using Manchester encoding techniques. The clock and data are combined into a single, serial bit stream (SCIO), where the clock signal is extracted by the receiver to correctly decode the timing and value of each bit. The bus is controlled by a master device (Xilinx Artix-7) which determines the clock period, controls the bus access and initiates all operations, while the SEEPROM works as a slave. Refer to Microchip's 11AA02E48 datasheet for more information.

Power and Power-On Sequence

Power Supply

Single 3.3V power supply (for both VIN and 3.3VIN power rails) with minimum current capability of 3A for system startup is recommended.

Power Consumption

Typical module power consumption is between 2-3W. Exact power consumption is to be determined.

TE0712-02 module can also be powered by split 5V/3.3V power sources if preferred. In such case apply 5V to B2B connectors VIN pins and 3.3V to 3.3 VIN pins, although lowest power consumption is achieved when powering the module from single 3.3V supply. When using split 5V/3.3V supplies the power consumption (and heat dissipation) will rise due to the DC-DC converter efficiency (it decreases when VIN/VOUT ratio rises).

Power-On Sequence

For the highest efficiency of the on-board DC-DC regulators, it is recommended to use same 3.3V power source for both VIN and 3.3VIN power rails. Although VIN and 3.3VIN can be powered up in any order, it is recommended to power them up simultaneously.

It is important that all baseboard I/Os are 3-stated at power-on until 3.3V is present on B2B connector JM2 pins 10 and 12, meaning that all on-module voltages have become stable and module is properly powered up.

See Xilinx datasheet DS181 - "Artix-7 FPGAs Data Sheet: DC and AC Switching Characteristics" for additional information. User should also check related baseboard documentation when choosing baseboard design for TE0712 module.

3.3Vout or 1.8Vout from the module can be used to enable power supply for variable bank power and periphery, see also

[4 x 5 SoM Integration Guide#4x5SoMIntegrationGuide-4x5ModuleControllerI/Os](#)

[FAQ#PCBDesign](#) Power sequencing for variable IO banks and connected periphery

Power Rails

Power Rail Name	B2B Connector JM1 Pin	B2B Connector JM2 Pin	Direction	Notes
VIN	1, 3, 5	2, 4, 6, 8	Input	SoM supply voltage (from the baseboard).
3.3VIN	13, 15	-	Input	SoM supply voltage (from the baseboard).

1.5V	-	19	Output	Module internal 1.5V level.
1.8V	39	-	Output	Module internal 1.8V level. Maximum 300mA available.
3.3V	-	10, 12	Output	Module internal 3.3V level.
3.3V	14		Output	Module internal 3.3V level. Not on all 4x5 modules
VCCIO13	-	1, 3	Input	High-Range bank supply voltage (from the baseboard).
VCCIO15	-	7, 9	Input	High-Range bank supply voltage (from the baseboard).
VCCIO16	9, 11	-	Input	High-Range bank supply voltage (from the baseboard).
VREF_JTAG	-	91	Output	JTAG reference voltage (3.3V).

Board to Board Connectors

These connectors are hermaphroditic. Odd pin numbers on the module are connected to even pin numbers on the baseboard and vice versa.

4 x 5 modules use two or three [Samtec Razor Beam LSHM connectors](#) on the bottom side.

- 2 x REF-189016-02 (compatible to LSHM-150-04.0-L-DV-A-S-K-TR), (100 pins, "50" per row)
- 1 x REF-189017-02 (compatible to LSHM-130-04.0-L-DV-A-S-K-TR), (60 pins, "30" per row) (depending on module)

Connector Mating height

When using the same type on baseboard, the mating height is 8mm. Other mating heights are possible by using connectors with a different height

Order number	Connector on baseboard	compatible to	Mating height
23836	REF-189016-01	LSHM-150-02.5-L-DV-A-S-K-TR	6.5 mm
	LSHM-150-03.0-L-DV-A-S-K-TR	LSHM-150-03.0-L-DV-A-S-K-TR	7.0 mm
23838	REF-189016-02	LSHM-150-04.0-L-DV-A-S-K-TR	8.0 mm
	LSHM-150-06.0-L-DV-A-S-K-TR	LSHM-150-06.0-L-DV-A-S-K-TR	10.0mm
26125	REF-189017-01	LSHM-130-02.5-L-DV-A-S-K-TR	6.5 mm
	LSHM-130-03.0-L-DV-A-S-K-TR	LSHM-130-03.0-L-DV-A-S-K-TR	7.0 mm
24903	REF-189017-02	LSHM-130-04.0-L-DV-A-S-K-TR	8.0 mm
	LSHM-130-06.0-L-DV-A-S-K-TR	LSHM-130-06.0-L-DV-A-S-K-TR	10.0mm

Connectors.

The module can be manufactured using other connectors upon request.

Connector Speed Ratings

The LSHM connector speed rating depends on the stacking height; please see the following table:

Stacking height	Speed rating
12 mm, Single-Ended	7.5 GHz / 15 Gbps
12 mm, Differential	6.5 GHz / 13 Gbps
5 mm, Single-Ended	11.5 GHz / 23 Gbps
5 mm, Differential	7.0 GHz / 14 Gbps

Speed rating.

Current Rating

Current rating of Samtec Razor Beam™ LSHM B2B connectors is 2.0A per pin (2 adjacent pins powered).

Connector Mechanical Ratings

- Shock: 100G, 6 ms Sine
- Vibration: 7.5G random, 2 hours per axis, 3 axes total

HR I/O banks input voltage	-0.20	VCCO + 0.2	V	Xilinx datasheet DS181

Physical Dimensions

- Module size: 50 mm x 40 mm. Please download the assembly diagram for exact numbers.
- Mating height with standard connectors: 8mm
- PCB thickness: 1.6mm
- Highest part on PCB: approx. 2.5mm. Please download the step model for exact numbers.

All dimensions are shown in millimeters.

Weight

16 - 27 g, Plain module (depends on variant).

8.8 g, Set of nuts and bolts.

Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#). The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#) are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#).

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
