# eMMC Boot

Xilinx ZYNQ supports MMC/eMMC as secondary boot media. This can be enabled by FSBL settings, it is not required to make any changes to the FSBL generated by Xilinx SDK.

```
Xilinx First Stage Boot Loader
Release 2014.4  Mar  3 2015-21:09:57
Devcfg driver initialized
Silicon Version 3.1
Booting Device is MMC
SD: rc= 0
MMC Init Done
Flash Base Address: 0xE0100000
Reboot status register: 0x60400000
Multiboot Register: 0x0000C000
Image Start Address: 0x00000000
Partition Header Offset:0x00000C80
Partition Count: 2
Partition Number: 0

Hello World
```

Example debug log from MMC boot on TE0720-02 on TE0701, an MMC Card was inserted into SD Card slot. To enable TE0720 to boot from SD Card in the slot, a small piece of paper was used to disable the card detect switch.

⚠ Xilinx FSBL would always boot from SDIO0 also in MMC mode! On TE0720 the on-board eMMC is on SDIO1, so that small modification to FSBL is required to change the boot device.

In order to change the boot device to SDIO1 a change is needed in diskio.c in the FSBL_bsp:

- - - #define SD_DEVICE_ID XPAR_XSDPS_0_DEVICE_ID

+++ #define SD_DEVICE_ID XPAR_XSDPS_1_DEVICE_ID
