Overview

The Trezz Electronic TE0791-01 is an adapter board for use with the XMOD [TE0790](#) board. The adapter board provides several connector types to get access to the signals and interfaces of the XMOD board. As further option footprints are available for JST Wire-To-Board IDC connectors with two different pin-assignments.

Key Features

- Xmod form-factor
 - size: 20 x 25 mm
 - M3 mounting hole
- Different connector types available
 - 2x6 PMOD connector
 - JTAG 1-row pin header female
 - 2x optional JST Wire-To-Board 6-pin IDC connector
 - 2x optional JST Wire-To-Board 10-pin IDC connector
 - IDC connectors with different pin-assignment each

Block Diagram

TE0791-01

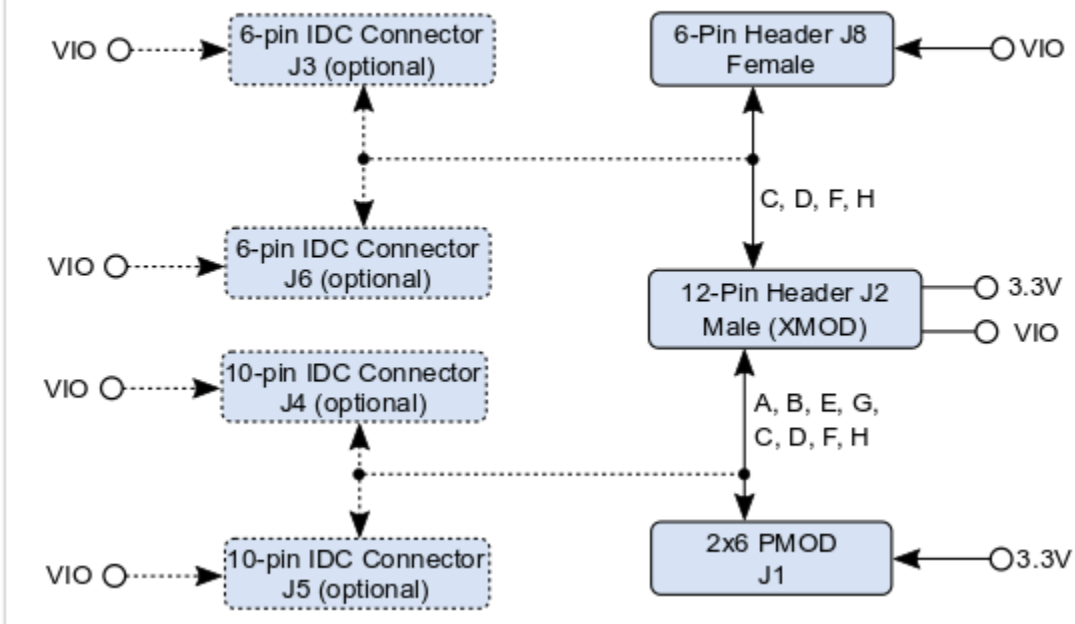

Figure 1: TE0791-01 block diagram.

Main Components

Figure 2: TE0790-02 main components. Top side view

1. 2x6 PMOD connector solder pads, J1 (on bottom side)
2. 6-Pin header solder pads, J8
3. 12-Pin header solder pads, J2
4. 10-pin IDC connector solder pads, J4 (solder pads J5 on bottom side)
5. 6-pin IDC connector solder pads, J3 (solder pads J6 on bottom side)
6. 2x6 PMOD connector
7. 1-row 6-pin header female (2.54 mm pitch)
8. 2-row 12-pin header male (2.54 mm pitch)

Signals, Interfaces and Pins

Figure 3: Connector Location

2x6 Pin Header

The 2x6 pin header (2.54mm grid size, male) J2 of the TE0791 board have to be connected to the corresponding XMOD pin header on the TE0790 board. The signal assignment of the pin header on the TE0790 board depends on the configuration of its System Controller CPLD firmware.

The pin assignment on the TE0791 adapter board is the same as on the TE0790 XMOD board:

Signal	J2 Pin Name	J2 Pin Name	Signal
GND		1*	GND
User Defined	C	A	User Defined
VIO			VDD 3.3V

User Defined	D	B	User Defined
User Defined	F	E	User Defined
User Defined	H	G	User Defined / Button (Reset_n)

Table 1: Pin header J2 signal assignment. *pin 1 on header J2 of the adapter board

1x6 Pin Header

On the female 1-row 6-pin header (2.54mm grid size, female) J8 are the XMOD signals C, D, F and H available. At standard System Controller CPLD firmware, this signals create the JTAG interface of the XMOD board:

J8 Pin Number	J8 Pin Name	Signal	Note
1	VIO	VCCIO	check TE0790 DIP-switch settings
2	GND	Ground	-
3	C	TCK	-
4	D	TDO	-
5	F	TDI	-
6	H	TMS	-

Table 2: Pin header J8 signal assignment with standard TE0790 CPLD firmware

2x6 PMOD Header

On the 2x6 PMOD header J1 are all XMOD signals A - H available. The pin- and signal-assignment with standard System Controller CPLD firmware of the XMOD board are as follows:

Note	Signal	J1 Pin Name	J1 Pin Number	J1 Pin Number	J1 Pin Name	Signal	Note
-	UART TXD	A	7	1	C	TCK	-
-	UART RXD	B	8	2	D	TDO	-
usable as GPIO	LED on TE0790	E	9	3	F	TDI	-
usable as GPIO	Button on TE0790	G	10	4	H	TMS	-
-	Ground	GND	11	5	GND	Ground	-
check TE0790 DIP-switch settings	VCC / VCCIO	3.3V	12	6	3.3V	VCC / VCCIO	check TE0790 DIP-switch settings

Table 3: PMOD J1 signal assignment with standard TE0790 CPLD firmware

10-pin IDC Connector

On the TE0791 board are footprints available for 10-pin JST Wire-To-Board IDC connectors J4 and J5 with two different pin-assignments, where all XMOD signals A - H are available. The pin- and signal-assignment with standard System Controller CPLD firmware of the XMOD board are as follows:

Pin Name	J4 Pin Number	J5 Pin Number	Signal	Note
A	1	10	UART TXD	
B	3	8	UART RXD	-
C	2	9	TCK	-
D	4	7	TDO	-
E	5	6	LED on TE0790	usable as GPIO

F	6	5	TDI	-
G	7	4	Button on TE0790	usable as GPIO
H	8	3	TMS	-
VIO	9	2	VCC / VCCIO	check TE0790 DIP-switch settings
GND	10	1	Ground	-

Table 4: IDC connector J4 and J5 signal assignment with standard TE0790 CPLD firmware

6-pin IDC Connector

On the TE0791 board are footprints available for 6-pin JST Wire-To-Board IDC connectors J3 and J6 with two different pin-assignments, where the XMOD signals C, D, F and H are available. At standard System Controller CPLD firmware, this signals create the JTAG interface of the XMOD board:

Pin Name	J3 Pin Number	J6 Pin Number	Signal	Note
C	6	1	TCK	-
D	5	2	TDO	-
F	4	3	TDI	-
H	3	4	TMS	-
VIO	2	5	VCC / VCCIO	check TE0790 DIP-switch settings
GND	1	6	Ground	-

Table 5: IDC connector J3 and J6 signal assignment with standard TE0790 CPLD firmware

Technical Specification

Physical Dimensions

- Module size: 24,65mm x 20,02mm. Please download the assembly diagram for exact numbers.
- Mating height with standard pin headers: 9.5 mm.
- PCB thickness: 1.6 mm.
- Highest part on PCB: approx. 7 mm on top side, 5 mm on bottom side. Please download the step model for exact numbers.

All dimensions are given in millimeters and mil.

Document Warranty

The material contained in this document is provided "as is" and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

Limitation of Liability

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

Copyright Notice

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#). The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#) are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#).

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
