Table of Contents

Overview

The Trenz Electronic TEC0850 board is a CompactPCI Serial card (3U form factor) integrating a Xilinx Zynq UltraScale+ MPSoC, one DDR4 SDRAM SODIMM socket with 64bit wide data bus, max. dual 512 MByte Flash memory for configuration and operation, 24 Gigabit transceivers on PL side and 4 on PS side, powerful switch-mode power supplies for all onboard voltages, USB2 and USB3 FIFO bridges and a large number of configurable I/Os available on the CompactPCI Serial backplane connectors.

Refer to http://trenz.org/tec0850-info for the current online version of this manual and other available documentation.

Key Features

- Zynq UltraScale+ MPSoC ZU15
- Front side interface connectors
  - RJ-45 GbE Ethernet interface
  - Circular push/pull connector with 4x on-board 8bit DAC output
  - MicroSD Card connector
  - USB 2.0 and USB 3.0 to FIFO bridge connector
  - 4x status LEDs
- 4 CompactPCI Serial connectors for backplane connection (3U form factor)
  - 24 GTH lanes
  - 4 PS GTR lanes
  - USB 2.0 interface
  - 64 Zynq PL HP I/O's
  - 8x PLL clock input
  - JTAG, I²C and 7 user I/O's to MAX10 FPGA
- 64bit DDR4 SODIMM (PS connected), 8 GByte maximum
- Dual parallel QSPI Flash (bootable), 512 MByte maximum
- 26-pin header with 20 Zynq PL HD I/O's
- 3-pin header with 2 MAX10 FPGA I/O's
- System Controller (Altera MAX10 FPGA SoC)
  - Power Sequencing
  - System management and control for MPSoC and onboard peripherals
- Si5345 programmable 10 output PLL clock generator
- Si53340 Quad clock buffer
- 2x 4bit DIP switches
- 1x user push button
- Zynq MPSoC cooling FAN connector
- On-board high-efficiency DC-DC converters

Initial Delivery State

Storage device name	Content	Notes
User configuration EEPROMs (1x Microchip 24AA128T-I/ST, 1x Microchip 24AA025E48T-I/OT)	Empty	Not programmed
USB 2.0 to UART/JTAG bridge configuration EEPROM (ST M93C66)	Empty	Not programmed
Si5345A programmable PLL NVM OTP	Empty	Not programmed
2x QSPI Flash memory	Empty	Not programmed

Initial delivery state of programmable devices on the module

Control Signals

To get started with TEC0850 board, some initial signals should be set described in the following table:

Control signal	Switch / Button	Signal Schematic Names	Connected to	Functionality	Notes
SC JTAGEN	S1-1	JTAGEN	SC FPGA U18, bank 1B, pin E5	OFF: MAX 10 JTAG enabled, ON: Zynq MPSoC JTAG enabled	-

EEPROM WP	S1-2	WP	EEPROM U63, pin 7	Write protect, active on OFF position	-
FPGA PUDC	S1-3	PUDC_B	Zynq MPSOC PS Config Bank 503, pin AD15	ON: internal pull-up resistors enabled, OFF: floating	-
SC Switch	S1-4	SW4	SC FPGA U18, bank 8, pin A5	low active logic	Reserved for future use
4bit boot mode setting code	S2-1	MODE3	Zynq MPSOC PS Config Bank 503, pin R23	Set 4-bit code for boot mode selection, most common modes are as follows: Set DIP-switches as bit pattern "S1-4 | S1-3 | S1-2 | S1-1 : Mode": ON | ON | ON | ON : JTAG Boot ON | ON | ON | OFF : Quad-SPI ON | ON | OFF | OFF : SD Card	See Zynq UltraScale+ Device Technical Reference Manual page 236 for full boot modes description
	S2-2	MODE2	Zynq MPSOC PS Config Bank 503, pin T23		
	S2-3	MODE1	Zynq MPSOC PS Config Bank 503, pin R22		
	S2-4	MODE0	Zynq MPSOC PS Config Bank 503, pin T22		
Push button	S3	USR_BTN	SC FPGA U18, bank 5, pin J10	low active logic	See the documentation of the firmware of SC FPGA U18 for current functionality of the onboard Push Button S3
SC FPGA U18 Reset	header J13, pin 6	M10_RST	SC FPGA U18, bank 8, pin A7	low active reset line	-

TEC0850 Control Signals

Signals, Interfaces, and Pins

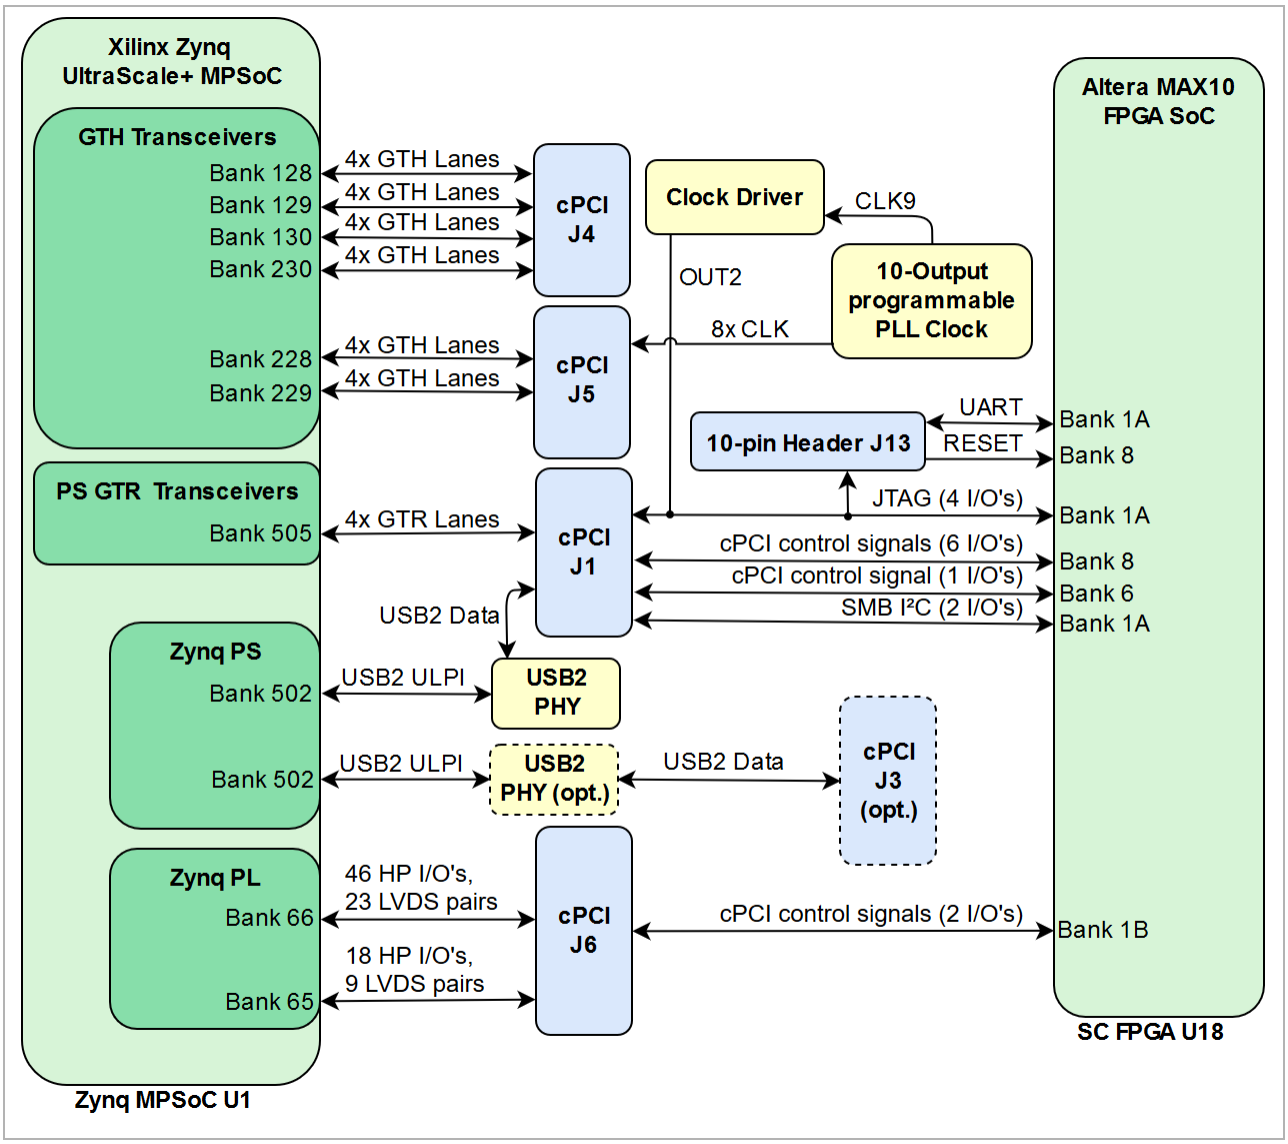
CompactPCI Serial Backplane Connectors

The TEC0850 board is equipped with 3 CompactPCI Serial high-speed backplane connectors which provide serial high-speed interconnects with transmission rates up to 12 Gb/s to the Zynq MPSoCs MGT lanes. On the cPCI connectors are also available single-ended Zynq MPSoC PL HP I/O's, high-speed USB 2.0 interface and single-ended I/O's of the System Controller FPGA.

The connectors support single-ended and differential signaling to the Zynq MPSoC PL HP banks 65 and 66 as those FPGA I/O's are routed as LVDS-pairs to the backplane connector.

The TEC0850 board is designed to be connected to the System Slot of the backplane, whereby 4 of the 6 connectors of the System Slot configuration are fitted to the TEC0850 board.

Following diagram gives an overview of the CompactPCI Serial backplane connectors and their connections to the Zynq Ultrascale+ MPSoC and the System Controller FPGA U18:



TEC0850-02 CompactPCI I/O and high-speed interfaces

Following tables contains information about the interfaces, I/O's, clock and VCCIO sources available on the cPCI connectors:

1. CompactPCI Serial Connector J1
2. CompactPCI Serial Connector J3
3. CompactPCI Serial Connector J4
4. CompactPCI Serial Connector J5
5. CompactPCI Serial Connector J6

CompactPCI Serial Connector J1

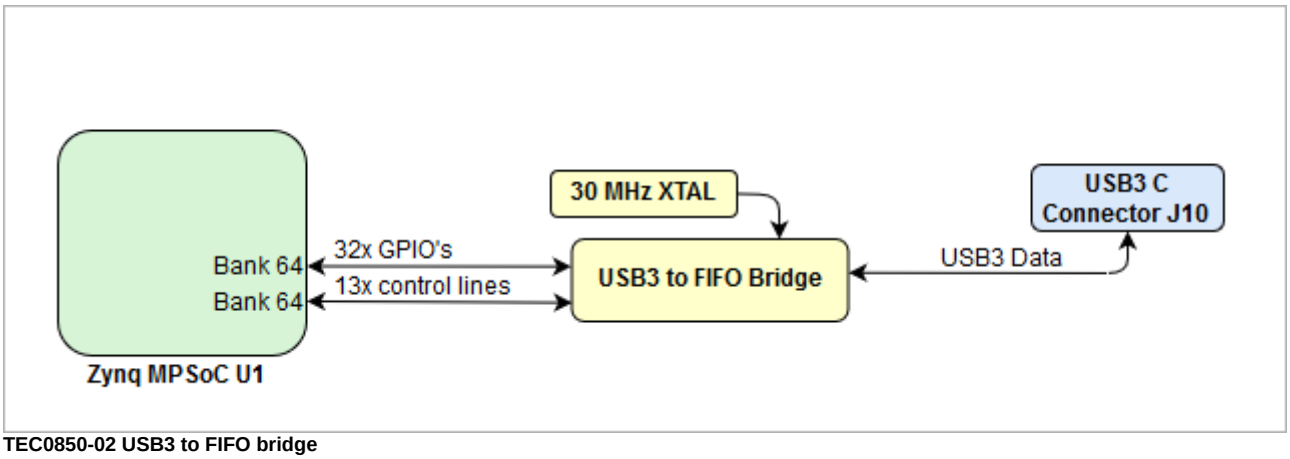
cPCI J6 Interfaces

USB-C Connector

Front panel USB-C Interface is connected to USB FIFO bridge chip FT601Q. 32-bit FIFO bridge provides a simple high-speed interface to Zynq UltraScale+ PL.



TEC0850-02 USB3 to FIFO bridge

The USB 3.0 to FIFO bridge FTDI FT601Q U9 is connected to the Zynq MPSoC's PL bank 64 and is accessible through USB-C connector J10:

Interface	Signal Schematic Names	Connected to	Notes
USB3 data lane	• SSRX_P • SSRX_N • SSTXX_P • SSTXX_N	USB C Connector J10	-
USB2 data lane	• SS_D_P • SS_D_N	USB C Connector J10	-
Control Lines	• FTDI_RESET_N • WAKEUP_N • SIWU_N • TXE_N • RXF_N • WR_N • RD_N • OE_N • BE_0 • BE_1 • BE_2 • BE_3 • FIFO_CLK	PL bank 64	-
Parallel GPIO's	• DATA0 • . • . • DATA31	PL bank 64	32bit FIFO register

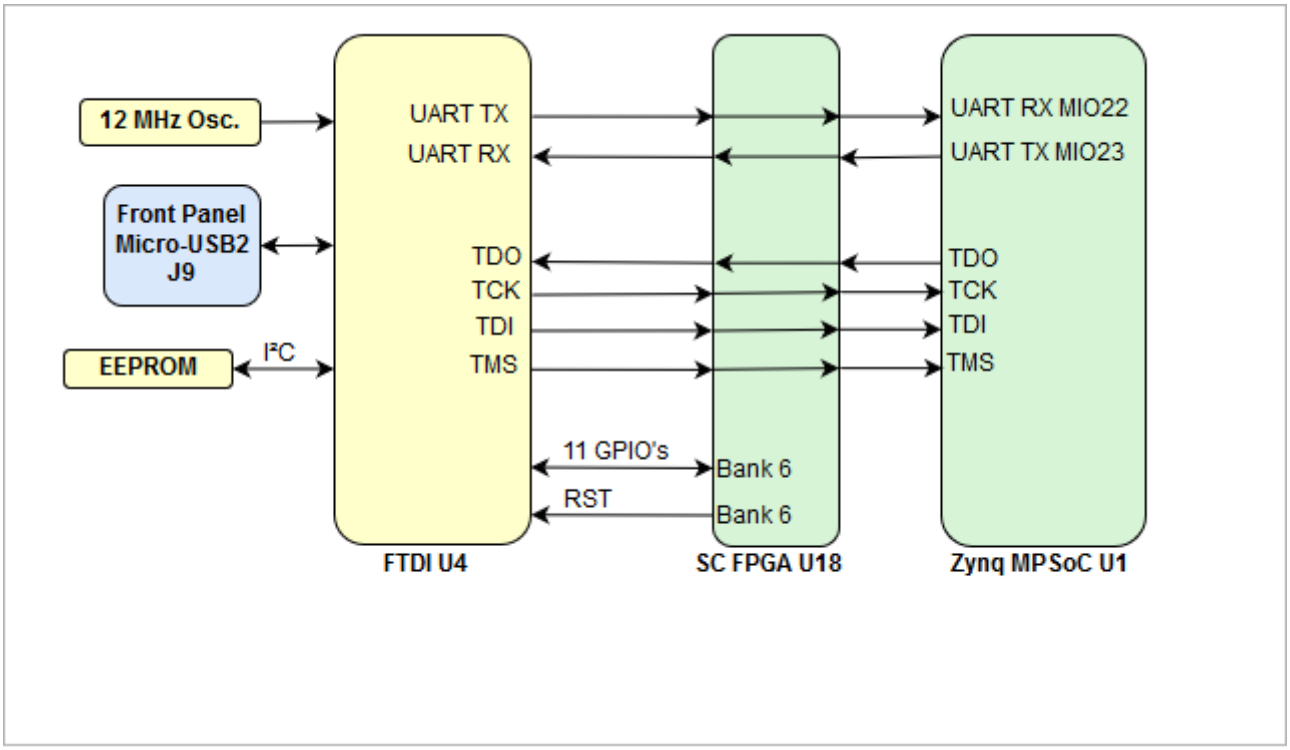
USB-C connector J10

See FT600Q-FT601Q IC Datasheet for interface details.

Micro-USB2 Connector

Front panel Micro-USB2 Interface provides access to UART and JTAG functions via FTDI FT2232 chip. Use of this feature requires that USB driver is installed on your host PC. UART0 with MIO 22 .. 23 should be selected in "Zynq UltraScale+ MPSoC" configuration.

The Digilent plug-in software and cable drivers must be installed on your machine for you to be able to use JTAG interface.



JTAG/UART Interface

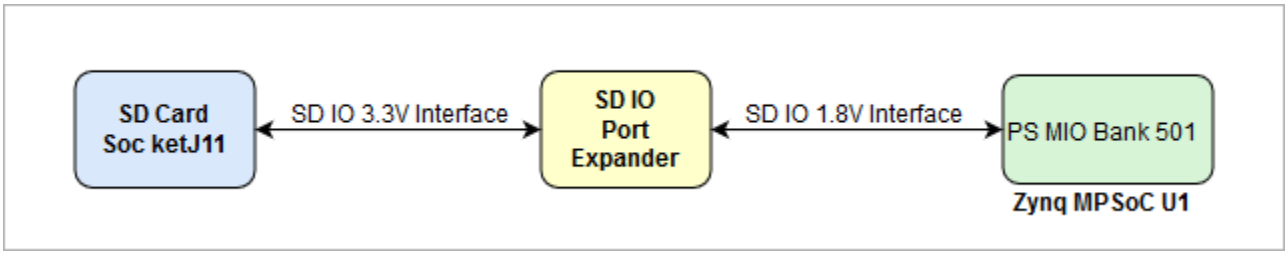
The USB2 to FIFO bridge FTDI FT2232H U4 is connected to the SC FPGA U18 and is accessible through Micro-USB2 connector J9:

Interface	Signal Schematic Names	Connected to	Notes
USB2 data lane	• USB_P • USB_N	Micro-USB2 connector J9	-
Control Lines	• FTDI_RST	SC FPGA U18, bank 6	-
Parallel GPIO's	• ADBUS0 • ADBUS1 • ADBUS2 • ADBUS3 • BDBUS0 • BDBUS1 • BDBUS2 • BDBUS3 • BDBUS4 • BDBUS5 • BDBUS6 • BDBUS7 • BCBUS0 • BCBUS1 • BCBUS2 • BCBUS3 • BCBUS4	SC FPGA U18, bank 6	-

Micro-USB2 connector J9

SD

The SD Card interface of the TEC0850 board is not directly wired to the connector J11 pins but through a Texas Instruments TXS02612 SD IO Port Expander, which is needed for voltage translation due to different voltage levels of the Micro SD Card and MIO-bank of the Xilinx Zynq MPSoC. The Micro SD Card has 3.3V signal voltage level, but the PS MIO-bank on the Xilinx Zynq MPSoC has VCCIO of 1.8V.



MicroSD Card interface

There are some limitations to use SD card Interface in Linux.

- Zynq UltraScale+ SD controller is working only in the 3.3V mode as it connected to SD card socket using SD IO port expander U10 as 1.8V to 3.3 V level shifter.
- Micro SD card socket has no "Write Protect" switch.

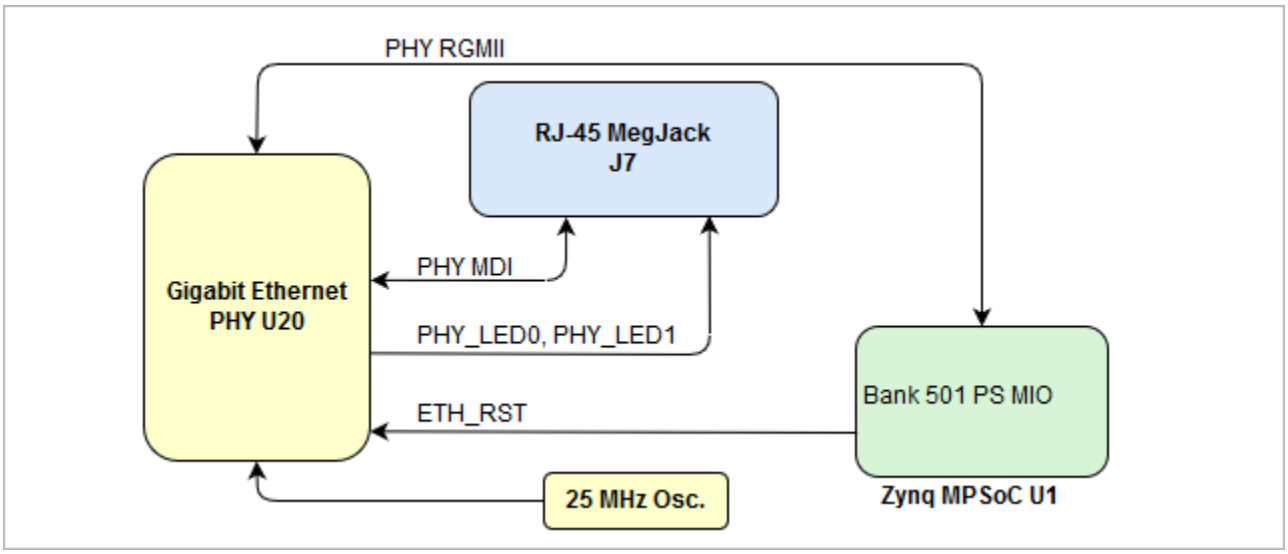
To force Linux driver not to use these features to add following instructions to device tree file.

```
&sdhci1 {

no-1-8-v;
disable-wp;
};
```

RJ45 - Ethernet

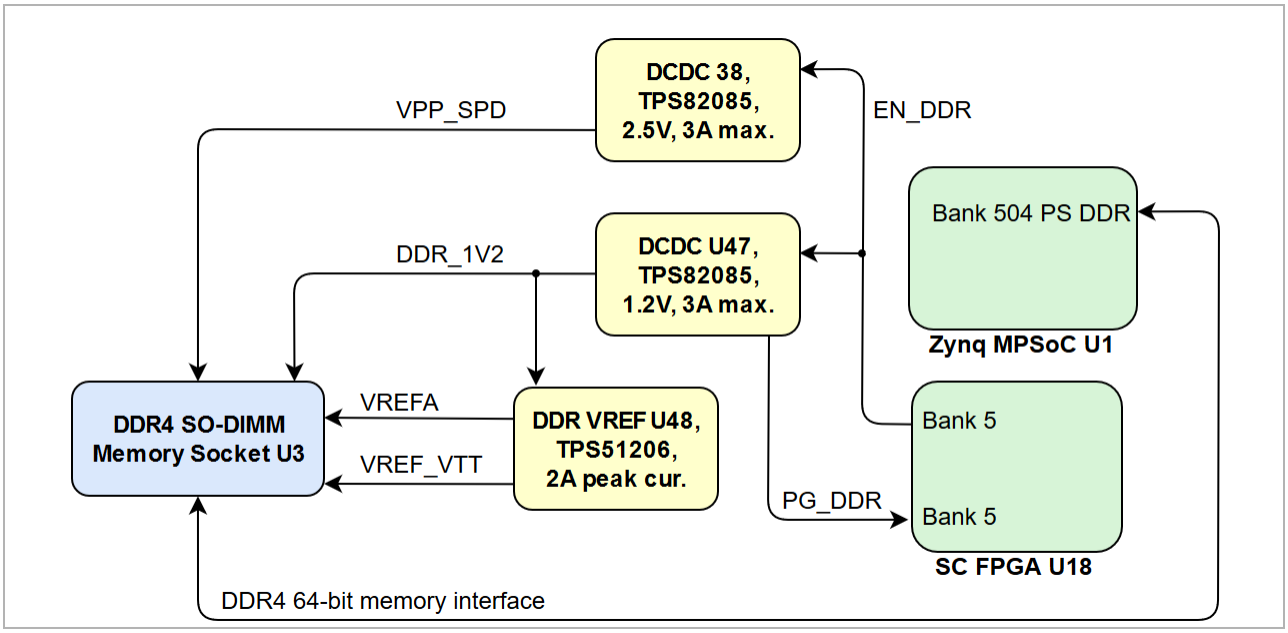
Onboard Gigabit Ethernet PHY is provided with Marvell Alaska 88E1512 IC U20. The Ethernet PHY RGMII interface is connected to the Zynq MPSoC Ethernet interface of the PS MIO bank 501. I/O voltage is fixed at 1.8V for HSTL signaling. The reference clock input of the PHY is supplied from the on-board 25.000000 MHz oscillator U21. The LEDs of the RJ-45 MegJack J13 are connected to the GbE PHY U20 status LED output.



Gigabit Ethernet Interface

DDR4 SODIMM Socket

On the TEC0850 board, there is a DDR4 memory interface U3 with a 64-bit data bus width available for SO-DIMM modules connected to the Zynq UltraScale+ DDRC hard memory controller.



DDR4 SDRAM SODIMM socket

Following table gives an overview of the memory interface I/O signals of the DDR4 SDRAM SO-DIMM Socket U3:

DDR4 SDRAM I/O Signal	Signal Schematic Name	Connected to	Notes

Address inputs	• DDR4-A0 ... DDR4-A16	PS DDR Bank 504	-
Bank address inputs	• DDR4-BA0 / DDR4-BA1		-
Bank group inputs	• DDR4-BG0 / DDR4-BG1		-
Differential clocks	• DDR4-CLK0_P • DDR4-CLK0_N • DDR4-CLK1_P • DDR4-CLK1_N		2 x DDR4 clock
Data input/output	• DQ0 ... DQ63		-
Check bit input/output	• CB0 ... CB7		-
Data strobe (differential)	• DDR4-DQS0_P • DDR4-DQS0_N • ... • DDR4-DQS8_P • DDR4-DQS8_N		-
Data mask and data bus inversion	• DDR4-DM0 ... DDR4-DM8		-
Serial address inputs	• DDR4-SA0 ... DDR4-SA2		address range configuration on I²C bus
Control Signals	• DDR4-CS_N0 / DDR4-CS_N1		chip select signal
	• DDR4-ODT0 / DDR4-ODT1		On-die termination enable
	• DDR4-RESET		nRESET
	• DDR4-PAR		Command and address parity input
	• DDR4-CKE0 / DDR4-CKE1		Clock Enable

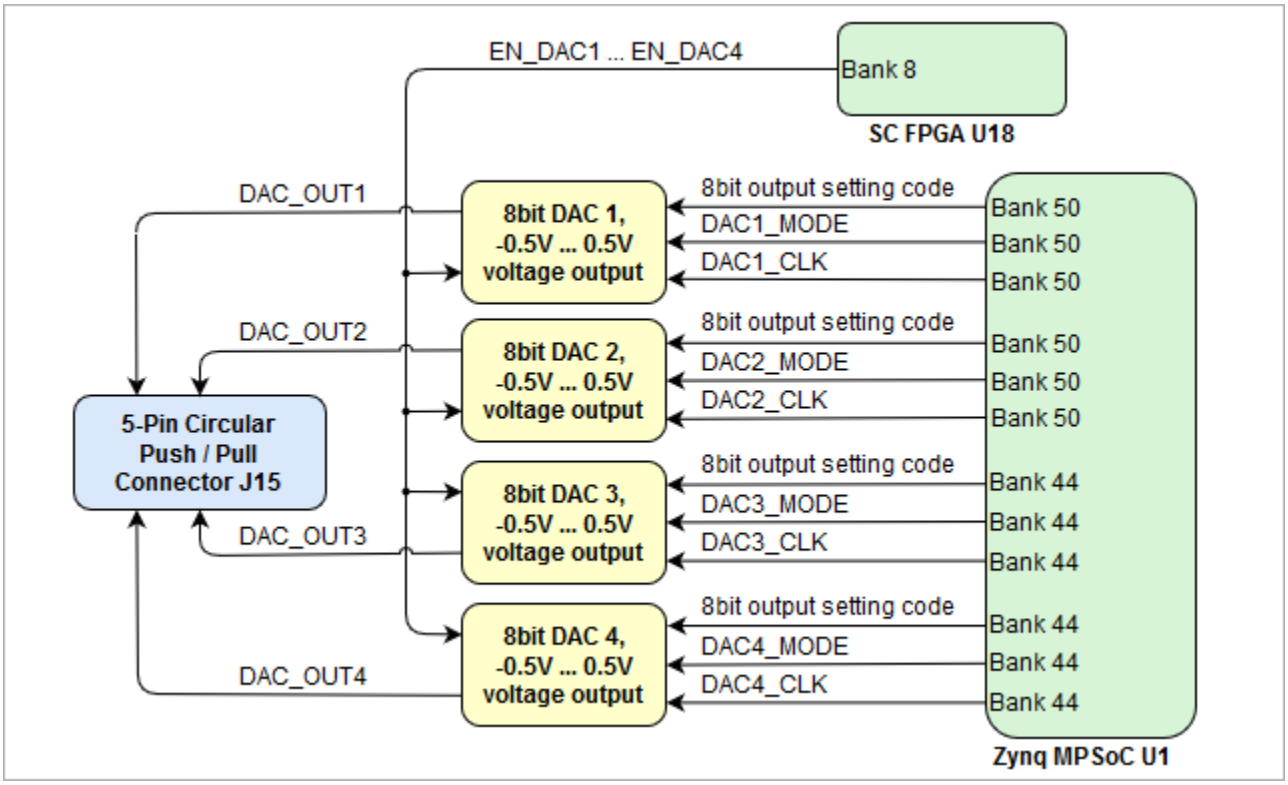
Circular Push Pull Connector

The TEC0850 board provides 4x DAC analog voltage output on the 5-pin circular push/pull connector J15. Each of the DAC units consists of one Texas Instruments THS5641AIPW digital to analog converter, TI THS4631D operational amplifier and two LDOs, by which the DAC unit can be switched on and off.

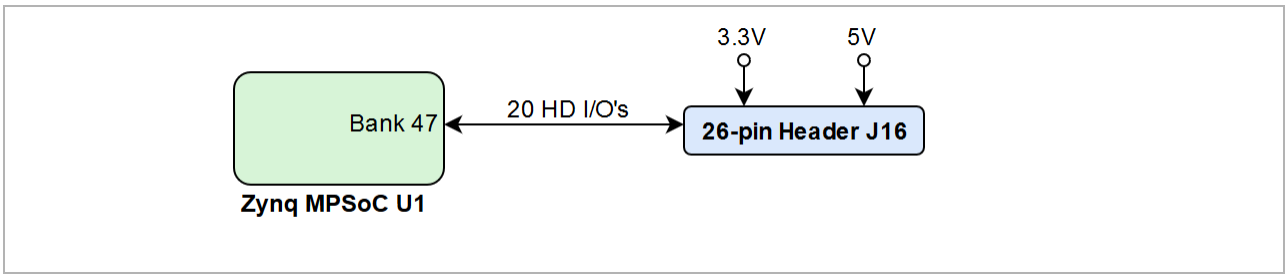
The TI THS4631D digital to analog converter wired to the operational amplifier circuitry creating the DAC unit with a voltage output range from -0.5V ... 0.5 V. See TI THS5641 datasheet and schematic how to control the DAC unit and to set the analog output voltages on connector J15.



4x 8bit DAC units

26-Pin IDC Header

There is a 26-pin IDC header (2x13, 1.27mm grid size) J16 available on the TEC0850 board which exposes the 20 FPGA HD I/O's of PL bank 47 to the user. The PL bank 47 has 3.3V VCCO bank voltage, on the header J16 there also the voltage levels 3.3V and 5V available. The I/O's can be accessed with a corresponding IDC connector.



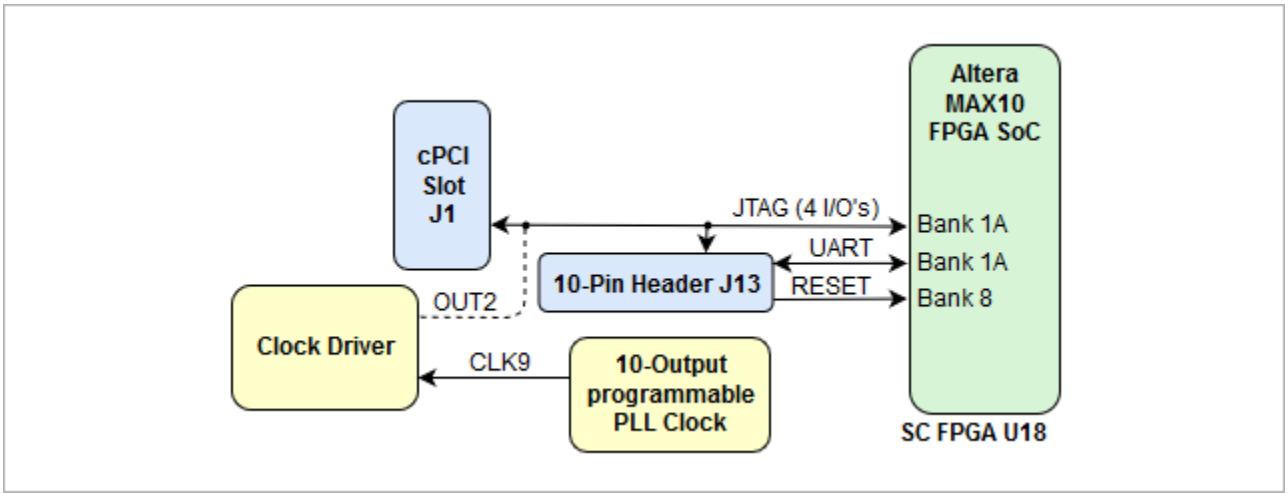
Zynq MPSoC PL I/O's IDC pin-header

10-Pin Header

On the TEC0850 there is a 10-pin SMT header (2x5, 2.54mm grid size) J13 present which provides access to the JTAG and UART interface of Altera MAX10 System Controller FPGA. The header J13 has a compatible pin assignment to the TEI0004 JTAG programmer for Altera FPGAs, the voltage levels 3.3V is on the header available as a reference I/O-voltage for JTAG and UART.

The 4 JTAG pins of the header J13 are also connected to the cPCI connector J1 and can be used as user GPIO's of the SC FPGA U18 with other functionalities then JTAG.

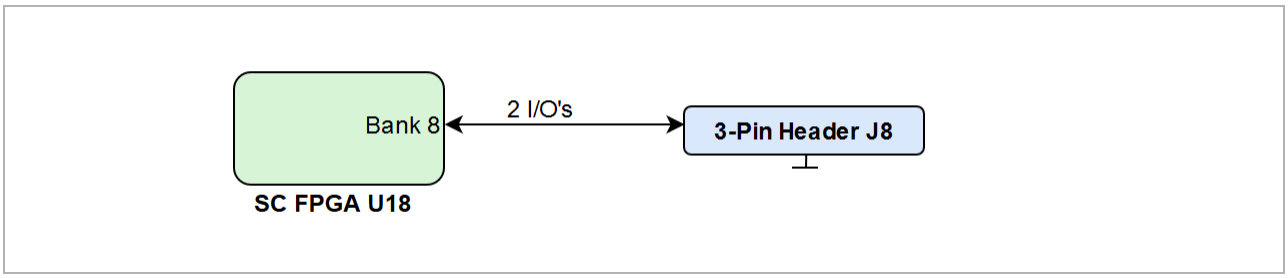
On the header J13, there is also a optional reference clock signal from PLL clock U14 available, if the necessary resistors and capacitors are fitted on board. The clock can also be used for the SC FPGA U18 and on the cPCI connector J1.



10-pin JTAG/UART header

3-Pin PicoBlade Header

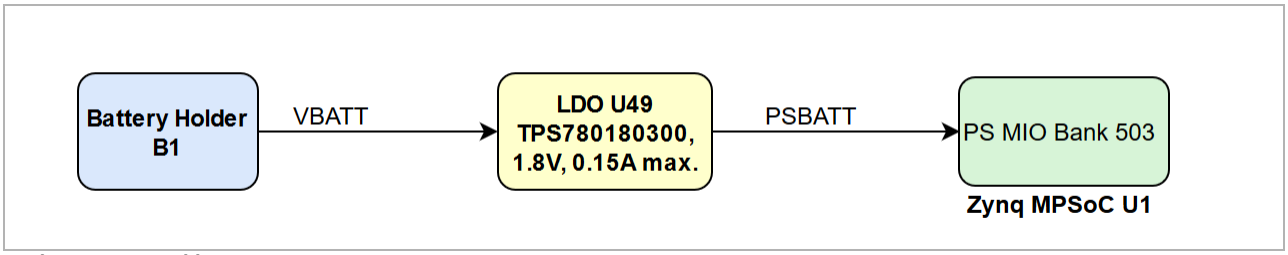
2 I/O's of the SC FPGA U18 are exposed to the on-board 3-Pin PicoBlade header J8 available to the user or for future use of upcoming versions of SC FPGA firmware.



3-pin PicoBlade header

Battery Holder

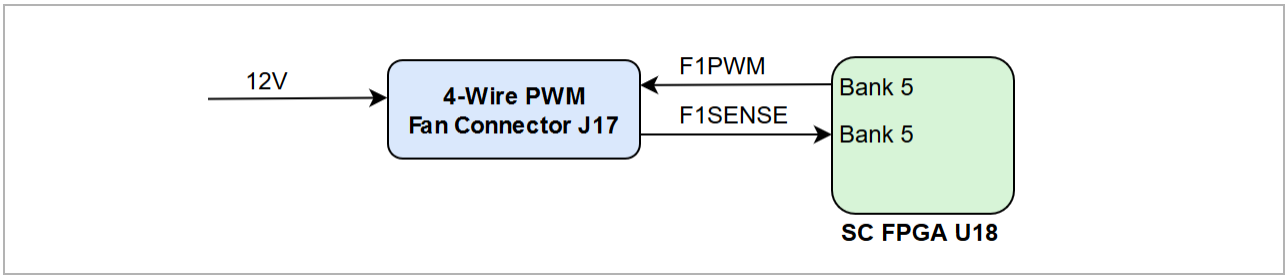
There is a CR1220 battery holder available to the supply the voltage for the Zynq MPSoC's Battery Power Domain (BBRAM and RTC). The battery voltage VBATT should be in the range of 2.2V to 5.5V, use the 3.0V CR1220 battery.



Backup-Battery Holder

4-Wire PWM FAN Connectors

The TEC0850 offers one 4-wire PWM FAN connector FPGA cooling fan controlled by SC FPGA U18:



4-wire PWM FAN connector

Onboard Peripherals

Zynq UltraScale XCZU15EG MPSoC

The TEC0850 board is populated with the Zynq UltraScale+ XCZU15EG-1FFVB1156E MPSoC.

The PS MIO pins are routed to the onboard peripherals as follows:

PS MIO	Function	Connected to
0	QSPI*	U24-B2, CLK
1	QSPI*	U24-D2, DO/IO1
2	QSPI*	U24-C4, WP/IO2
3	QSPI*	U24-D4, HOLD/IO3
4	QSPI*	U24-D3, DI/IO0

5	QSPI*	U24-C2, CS
6	-	not connected
7	QSPI*	U25-C2, CS
8	QSPI*	U25-D3, DI/IO0
9	QSPI*	U25-D2, DO/IO1
10	QSPI*	U17-C4, WP/IO2
11	QSPI*	U25-D4, HOLD/IO3
12	QSPI*	U25-B2, CLK
13 ... 15	-	not connected
16	USB2 PHY Reset	USB2 PHY U11, pin27
17	USB2 PHY Reset	USB2 PHY U13, pin27 (optional, PHY not fitted by default)
18 ... 19	-	not connected
20 ...21	PS MIO I²C	I²C peripherals
22 ... 25	user MIO	SC FPGA U18, bank 2
26 ... 38	RGMII	GbE PHY U20
39 ... 44	-	not connected
45 ... 51	SD IO	MicroSD Card socket J11
52 ... 63	USB2 ULPI	USB2 PHY U11
64 ... 75	USB2 ULPI	USB2 PHY U13 (optional, PHY not fitted by default)
76 ... 77	ETH MDC / MDIO	GbE PHY U20

* Flash is used as QSPI dual parallel
Default MIO Configuration

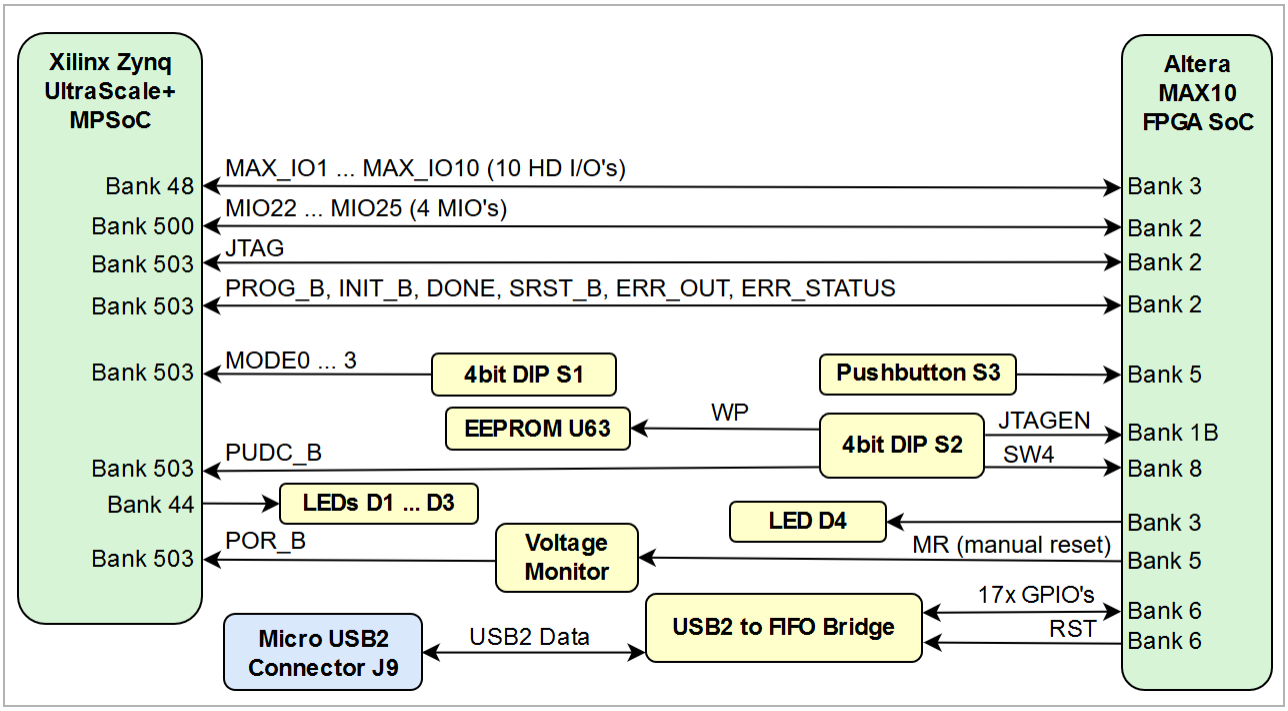
MAX10 System Controller FPGA

The TEC0850 board is equipped with one System Controller FPGA (Intel MAX10 10M08SAU169C8G) with the schematic designators U18. The SC FPGA is the central system management unit where essential control signals are logically linked by the implemented logic in FPGA firmware, which generates output signals to control the system, the onboard peripherals, and the interfaces. Interfaces like JTAG and UART between the FTDI FT2232H chip and to the Zynq MPSoC are by-passed, forwarded and controlled by the System Controller FPGA.

Other tasks of the System Controller FPGA are the monitoring of the power-on sequence and to display the programming state of the FPGA module. The functionalities and configuration of the pins depending on the SC FPGA's firmware. The documentation of the firmware of SC FPGA U18 contains detailed information on this matter.

The System Controller FPGA is connected to the Zynq Ultrascale+ MPSoC through MIO and PL pins. The signals of these pins are forwarded by the SC FPGA to control some of the onboard peripherals.

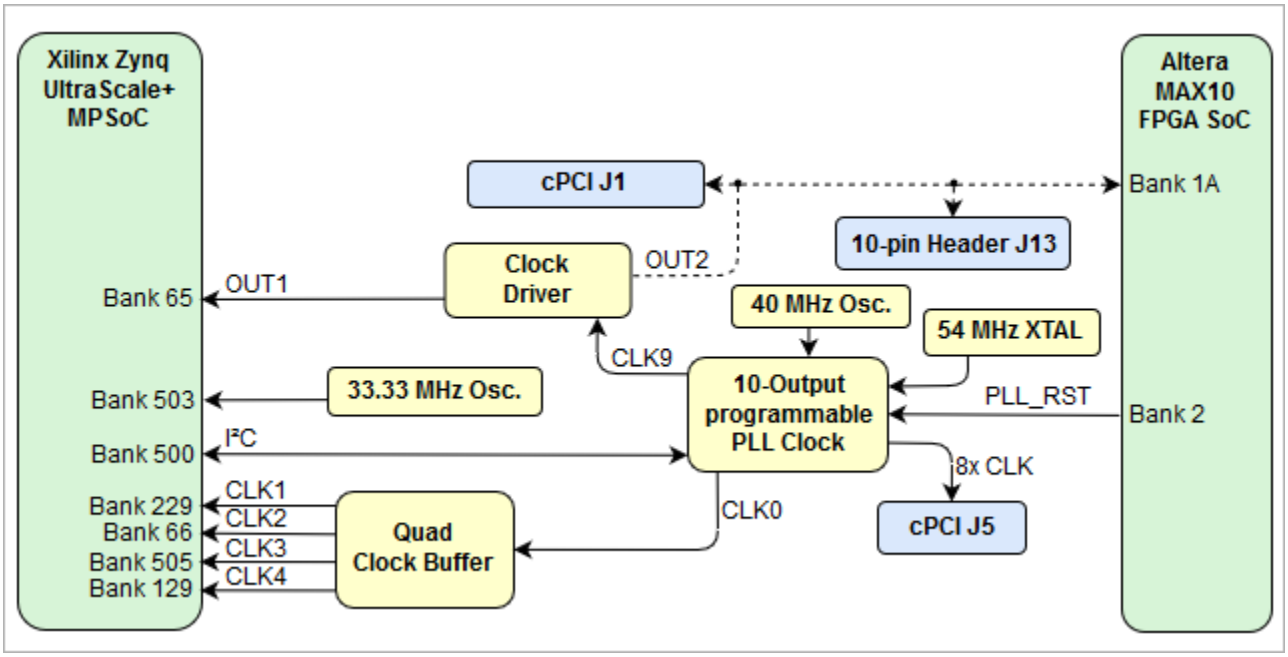
Following block diagram visualizes the connection of the SC FPGA with the Zynq Ultrascale+ MPSoC via 4 PS MIO pins (MIO22 ... 25), PS Config control signals and 10 singled ended PL HD bank 48 I/O pins (MAX_IO1 ... MAX_IO10):



TEC0850 MAX10 System Controller FPGA

Programmable Clock Generator

There is a Si5345A U14, Silicon Labs I^{2}C programmable 10-output PLL clock generator on-board to generate various reference clocks for the Zynq MPSoC MGT banks and onboard peripherals.



10-output I²C programmable clock generator

Following table shows onboard Silicon Labs I^2C programmable Si5345A U17 10-output programmable PLL reference clock generator inputs and outputs:

Si5345A U14 Pin	Signal Schematic Name	Connected to	Signal Direction	Note
IN0	• IN0_P	40.000 MHz Oscillator U75	Input	external reference clock input
	• IN0_N	GND

SCLK, SDA/SDIO	• I2C_SCL • I2C_SDA	• MIO20 • MIO21	BiDir	I²C address 0x69

SI5345 Clock Outputs

The clock outputs OUT1 and OUT9 are distributed via clock buffer U16 and clock driver U14 to several PL and MGT banks:

Si53340 U16 Pin	Signal Schematic Name	Connected to	Signal Direction	Note
Q0	• CLK1_P • CLK1_N	U1, pin G8 U1, pin G7	Output	GTH bank 229 reference clock input
Q1	• CLK2_P • CLK2_N	U1, pin Y8 U1, pin Y7	Output	PL HP bank 66 reference clock input
Q2	• CLK3_P • CLK3_N	U1, pin U27 U1, pin U28	Output	PS GTR Bank 505 reference clock input
Q3	• CLK4_P • CLK4_N	U1, pin L27 U1, pin L28	Output	GTH bank 129 reference clock input
LTC6957 U73 Pin				

OUT1	• CK_PLL_P • CK_PLL_N	U1, pin AG5 U1, pin AG4	Output	PL HP bank 65 reference clock input
OUT2	• CK_P • CK_N	Signal 'SATA_SL' Signal 'SATA_SCL'	Output	optional reference clock input to cPCI connector J1, if decoupling capacitors and resistors are fitted (see schematic), also shared with SC FPGA and header J13

Clock driver and buffer outputs

The clock generator U14 is programmable via the onboard I²C bus connected to MIO 20...21 pins. The I²C address is shown in the table below.

I2C address	Chip	Description
0x69	U14 Si5345	Clock generator and distributor

SI5345 I2C address

Oscillators

The TEC0850 board is equipped several onboard oscillators to provide the Zynq Ultrascale+ MPSoC's PS and PL banks and the onboard peripherals with reference clock-signals:

Clock Source	Signal Schematic Name	Frequency	Clock Input Destination
SiTime SiT8008BI oscillator, U22	• PS_CLK	33.333333 MHz	Zynq MPSoC U1 PS Config Bank 503, pin U24

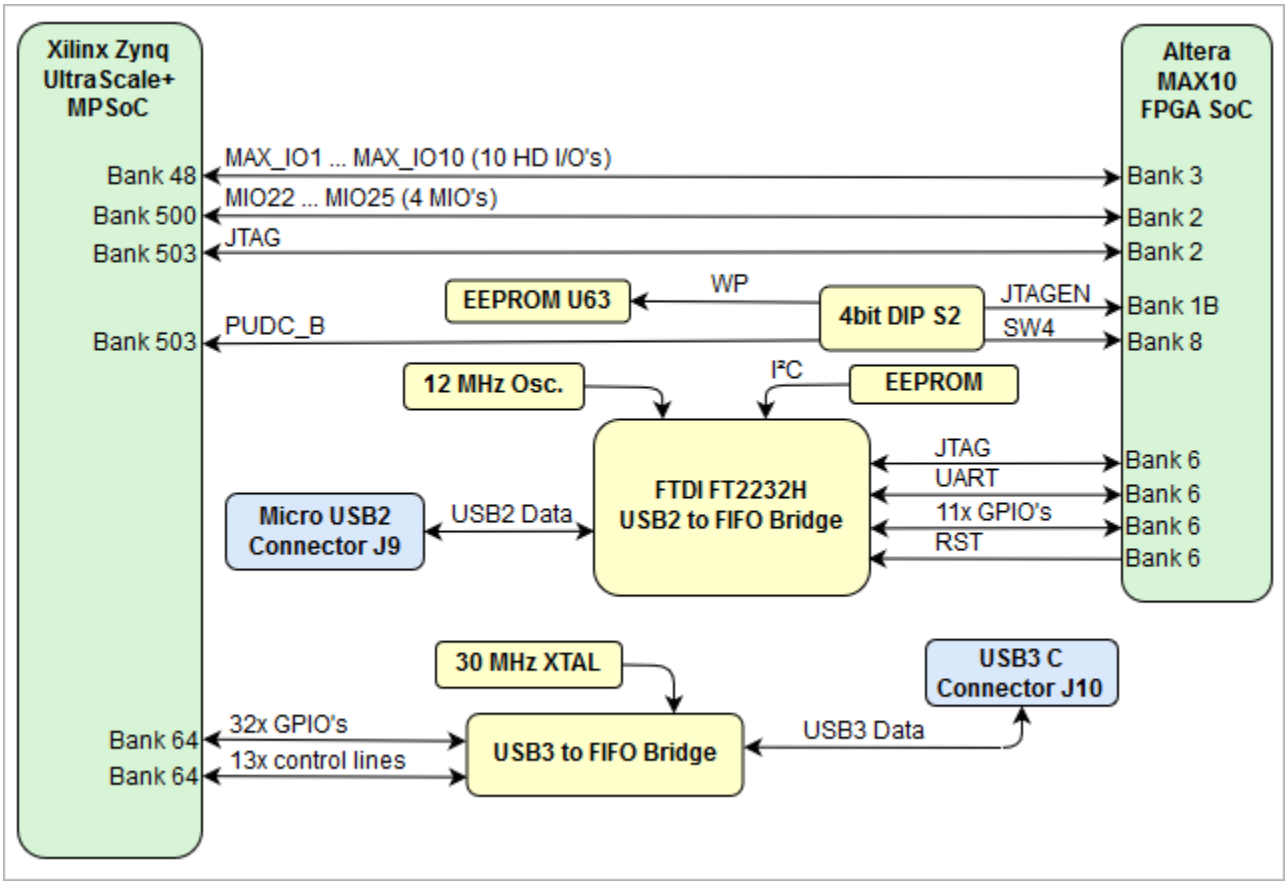
SiTime SiT8008AI oscillator, U16	• OSCI	12.000000 MHz	FTDI FT2232H U4, pin 3
Kyocera CX3225SB30000, Y1	-	30.000 MHz	FTDI FT601Q U9, pin 21/22
CM-2012-2pad, Y2	-	32.768000 kHz	Zynq MPSoC U1 PS Config Bank 503, pin V21/V22
Kyocera CX3225SB26000, Y3	• XAXB_P • XAXB_N	54.000 MHz	10-output PLL clock generator U14, pin 8/9
SiTime SiT8008BI oscillator, U21	• ETH_CLKIN	25.000000 MHz	Gigabit Ethernet PHY U20, pin 34
ASVTX-12-A oscillator, U75	• IN0_P	40.000 MHz	10-output PLL clock generator U14, pin 63

TEC0850 on-board oscillators

FTDIs

The TEC0850 board is equipped with 2 FTDI chips FT2232H (U4) and FT601Q (U9). Both chips are USB to Multipurpose UART/FIFO bridges which converts signals from USB2 or USB3 to a variety of standard serial and parallel interfaces.



TEC0850 on-board FTDI chips

FT2232H

The TEC0850 board is equipped with the FTDI FT2232H USB2 to JTAG/UART adapter controller connected to micro-USB2 connector J9 to provide JTAG and UART access to the Xilinx UltraScale+ Zynq SoC or Intel MAX10 (switchable over DIP) . There is also a 256-byte configuration EEPROM U6 wired to the FT2232H chip via Microwire bus which holds pre-programmed license code to support Xilinx programming tools. Refer to the FTDI datasheet to get information about the capacity of the FT2232H chip.

> Do not access the FT2232H EEPROM using FTDI programming tools, doing so will erase normally invisible user EEPROM content and invalidate stored Xilinx JTAG license. Without this license, the onboard JTAG will not be accessible anymore with any Xilinx tools. Software tools from the FTDI website do not warn or ask for confirmation before erasing user EEPROM content.

Channel A of the FTDI IC is configured as JTAG interface (MPSSE) connected to the SC FPGA U18, the JTAG signals are forwarded to the JTAG interface of the Zynq MPSoC on PS config bank 503.

Channel B can be used as UART Interface routed to SC FPGA U18, 11 I/O's of Channel B is routed to are usable for example as GPIOs and other standard interfaces.

FT2232H U3 Pin	Signal Schematic Name	Connected to	Notes

FT2232H interface connections

FT601Q

The TEC0850 board is equipped with the FTDI FT601Q USB3 to 32bit-FIFO adapter controller connected to USB-C connector J10 to provide access to the Zynq MPSoC PL HP I/O's of bank 64. Also, 13 control signals of the FTDI FT601Q are connected to the HP bank 64.

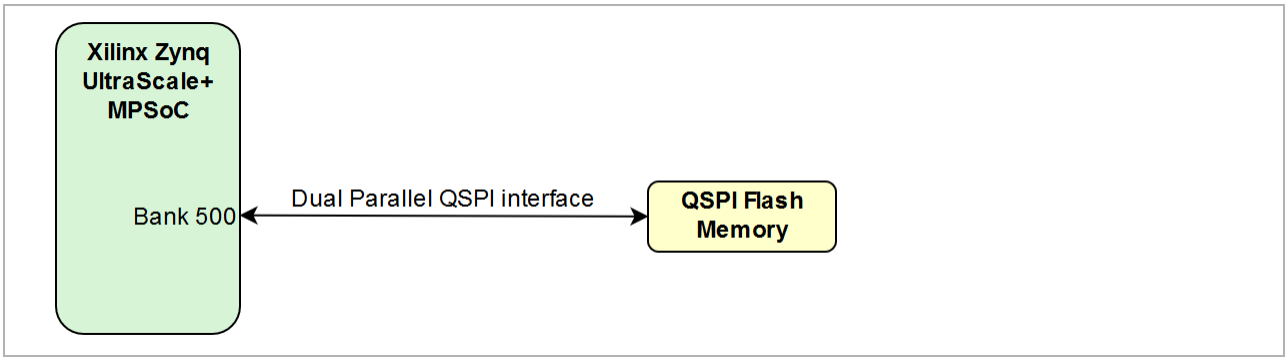
Quad-SPI Flash Memory

On-board QSPI flash memory U24 and U25 on the TEC0850 board is provided by Micron Serial NOR Flash Memory N25Q256A with 256 Mbit (32 MByte) storage capacity each, 64 MByte total QSPI Flash memory. The QSPI Flash memory ICs are connected to the PS MIO bank (Dual QSPI MIO0 ... MIO12) of the Zynq Ultrascale+ MPSoC, enabling dual parallel booting from QSPI Flash memory. This nonvolatile memory is used to store an initial FPGA configuration. Besides FPGA configuration, remaining free flash memory can be used for user application and data storage. All four SPI data lines are connected to the Zynq MPSoC allowing x1, x2 or x4 data bus widths. Maximum data rate depends on the selected bus width and clock frequency used.



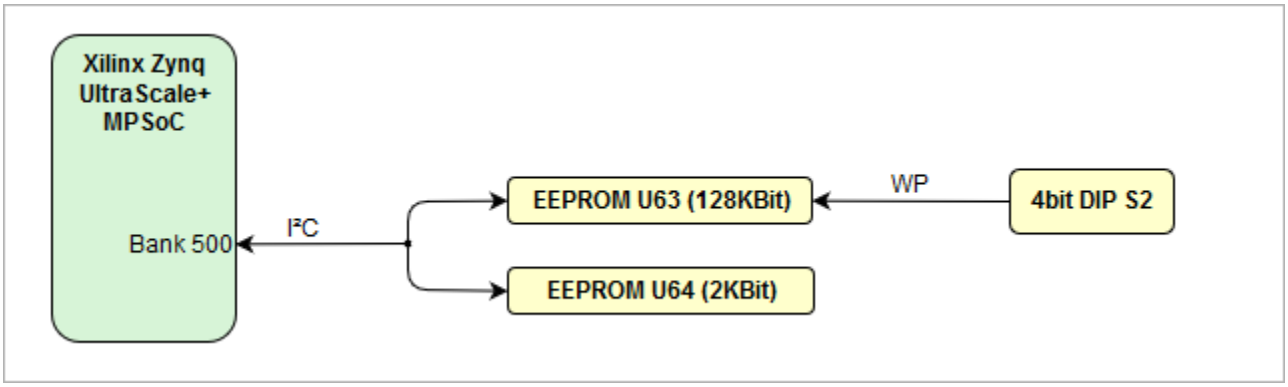
Quad-SPI Flash Memory

IC	Memory Density	MIO	Signal Schematic Name	Flash Memory Pin
QSPI Flash U24, N25Q256A11E1240E	256 Mbit (32 MByte)	0	MIO0	B2
		1	MIO1	D2
		2	MIO2	C4
		3	MIO3	D4
		4	MIO4	D3
		5	MIO5	C2
QSPI Flash U25, N25Q256A11E1240	256 Mbit (32 MByte)	7	MIO7	C2
		8	MIO8	D3
		9	MIO9	D2
		10	MIO10	C4
		11	MIO11	D4
		12	MIO12	B2

Quad-SPI Flash memory interface connections

EEPROMs

The TEC0850 board contains several EEPROMs for configuration and general user purposes. The EEPROMs are provided by Microchip, the I²C interfaces are connected to Zynq MPSoC bank 502 MIO 20...21 pins:



On-board configuration EEPROMs

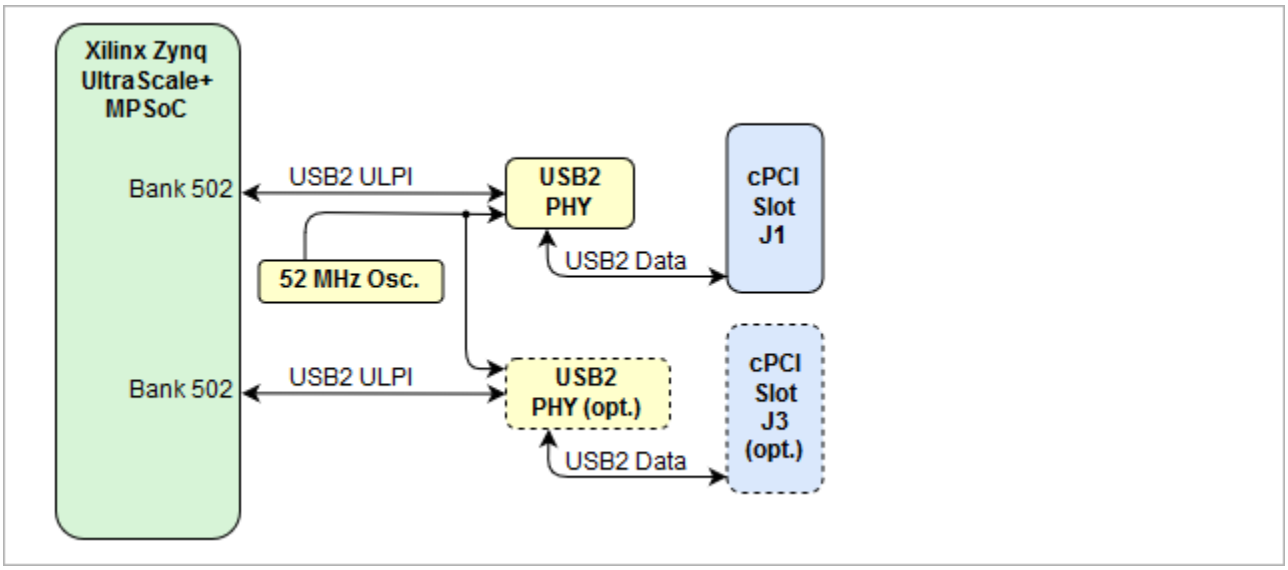
The EEPROMs U63 and U64 are programmable via the onboard I²C bus connected to MIO 20...21 pins. The I²C address is shown in the table below.

I2C address	Chip	Description
0x50	U63 24AA128T-I/ST	128K Serial EEPROM
0x53	U64 24AA025E48T-I/OT	2K Serial EEPROM with EUI-48™ or EUI-64™ Node Identity

EEPROMs I²C Addresses

USB2 PHY

USB2 PHY U11 is provided by USB3320 from Microchip. The ULPI interface is connected to the Zynq Ultrascale+ PS USB0. I/O voltage is fixed at 1.8V and PHY reference clock input is supplied from the on-board 52.000000 MHz oscillator U12. There is also the option to equip the TEC0850 board with a second USB2 PHY U13 connected to the optional cPCI backplane connector J3. Both, the optional USB2 PHY U13 and cPCI connector J3 are not fitted by default.



TEC0850 cPCI USB2 interface

USB2 PHY U11 Pin	Connected to	Notes
ULPI	PS bank MIO52 ... MIO63	Zynq Ultrascale+ USB0 MIO pins are connected to the PHY
REFCLK	-	52MHz from onboard oscillator U12
REFSEL[0..2]	-	All pins set to GND selects the external reference clock frequency (52.000000 MHz)
RESETB	Zynq MPSoC MIO16, pin AM16	Low active USB2 PHY Reset
DP, DM	cPCI connector J1	USB2 data lane
CPEN	-	External USB power switch active-high enable signal
VBUS	5V	Connected to onboard 5V voltage level via a series of resistors, see schematic
ID	3.3V	USB2 OTG A-Device (host)

optional USB2 PHY U13 Pin	Connected to	Notes
ULPI	PS bank MIO64 ... MIO75	Zynq Ultrascale+ USB1 MIO pins are connected to the PHY
REFCLK	-	52MHz from onboard oscillator U12
REFSEL[0..2]	-	All pins set to GND selects the external reference clock frequency (52.000000 MHz)
RESETB	Zynq MPSoC MIO17, pin AP16	Low active USB2 PHY Reset
DP, DM	optional cPCI connector J3	USB2 data lane

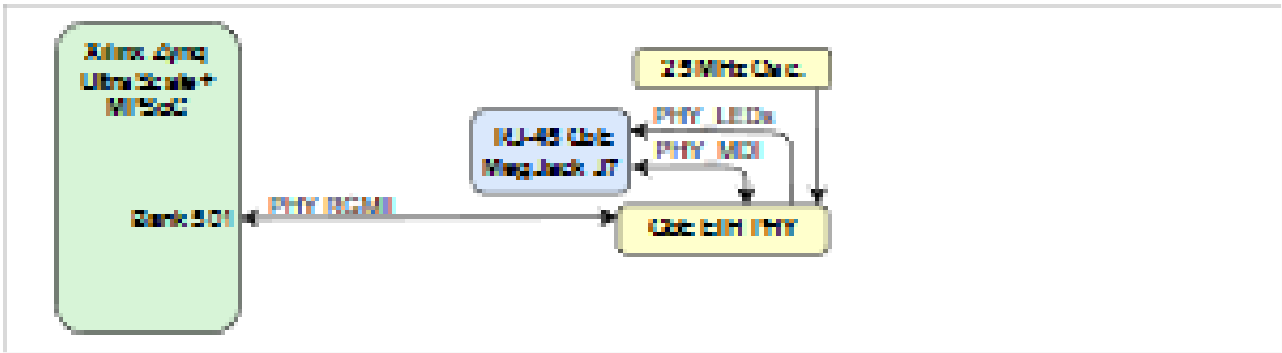
VBUS	5V	Connected to onboard 5V voltage level via a series of resistors, see schematic
ID	3.3V	USB2 OTG A-Device (host)

USB2 ULPI interface description

Gigabit Ethernet PHY

Onboard Gigabit Ethernet PHY U20 is provided with Marvell Alaska 88E1512, which use MDIO address 1. The Ethernet PHY RGMII interface is connected to the Zynq Ultrascale+ Ethernet0 PS GEM3. I/O voltage is fixed at 1.8V for HSTL signaling. The reference clock input of the PHY is supplied from the on-board 25.000000 MHz oscillator U21.



TEC0850 GbE interface with RJ-45 MegJack

8bit DACs

The TEC0850 Board has 4 8-bit parallel Texas Instruments THS5641AIPW digital to analog converter (DAC) with up to 100 MSPS update rate connected to TI THS4631D operational amplifiers. See Schematic circuitry and TI THS5641 data sheet for proper operation of the on-board DAC units.

DAC unit	Signal Schematic Name	Connected to	Functionality
DAC1	DAC1_D0	PL HD bank 50, pin D11	Digital input bits D[7:0]
U28	DAC1_D1	PL HD bank 50, pin D10

DAC units interface description

DIP-Switches

There are two 4-bit DIP-witches S3 and S4 present on the TEC0850 board to configure options and set parameters. The following section describes the functionalities of the particular switches.

The table below describes the functionalities of the switches of DIP-switches S1 and S2 at their every position:

DIP-switch S1	Signal Schematic Name	Connected to	Functionality	Notes
S1-1	JTAGEN	SC FPGA U18, bank 1B, pin E5	Positions: OFF: SC FPGA's JTAG enabled ON: Zynq MPSoC's JTAG enabled	to switch the JTAG interface between SC FPGA and Zynq MPSoC
S1-2	WP	EEPROM U63, pin 7	Positions: OFF: Write Protect is enabled ON: Write Protect is disabled	-
S1-3	PUDC_B	Zynq MPSOC PS Config Bank 503, pin AD15	Positions: ON: PUDC_B is Low OFF: PUDC_B is HIGH	Internal pull-up resistors during configuration are enabled at ON-position, means I/O's are 3-stated until the configuration of the FPGA completes.
S1-4	SW4	SC FPGA U18, bank 8, pin A5	SC Switch (Reserved for future use)	low active logic
DIP-switch S2	**Signal Schematic Name**	**Connected to**	**Functionality**	**Notes**
S2-1	MODE3	Zynq MPSOC PS Config Bank 503, pin R23	set 4-bit code for boot mode selection	See Zynq UltraScale+ Device Technical Reference Manual page 236 for full boot modes description Set DIP-switches as bit pattern of S2
S2-2	MODE2	Zynq MPSOC PS Config Bank 503, pin T23		
S2-3	MODE1	Zynq MPSOC PS Config Bank 503, pin R22		
S2-4	MODE0	Zynq MPSOC PS Config Bank 503, pin T22		

BOOT Mode	1	2	3	4
Quad-SPI (32b	ON	ON	OFF	ON
SD1 (2.0)	ON	OFF	ON	OFF

TEC0850 DIP-switches description

Buttons

There is one switch button available to the user connected to the SC FPGA U18:

Button	Signal Schematic Name	Connected to	Notes
S3	USR_BTN	SC FPGA U18, bank 5, pin J10	low active logic Refer documentation of the firmware of SC FPGA U18.

On-board Push-Button

LEDs

The TEC0850 board is equipped with several LEDs to signal current states and activities.

LED	Color	Connected to	Description and Notes
Front panel LED D1	Red	Zynq MPSoC PL bank 11, pin AF15	PL User defined LED
Front panel LED D2	Green	Zynq MPSoC PL bank 11, pin AG15	PL User defined LED
Front panel LED D3	Green	Zynq MPSoC PL bank 11, pin AE15	PL User defined LED
Front panel LED D4	Green	SC FPGA U18 bank 3, pin M4	Power Good

On-board LEDs description

Power and Power-On Sequence

Power Consumption

The maximum power consumption of a module mainly depends on the design running on the FPGA.

Xilinx provides a power estimator excel sheets to calculate power consumption. It's also possible to evaluate the power consumption of the developed design with Vivado. See also Trenz Electronic Wiki FAQ.

Power Input	Typical Current
VIN_12V	TBD*

Typical power consumption

Power supply with a minimum current capability of 5A (60W@12V, CompactPCI Serial spec.) for system startup is recommended.

The TEC0850 board is equipped with the Xilinx Zynq UltraScale+ MPSoC delivers a heterogeneous multi-processing system with integrated programmable logic and independently operable elements and is designed to meet an embedded system power management requirement by advanced power management features. These features allow offsetting the power and heat constraints against overall performance and operational efficiency.

This features allowing highly flexible power management are achieved by establishing Power Domains for power isolation. The Zynq UltraScale+ MPSoC has multiple power domains, whereby each power domain requires its own particular on-board DC-DC converters.

The Processing System contains three Power Domains:

- Battery Power Domain (BBRAM and RTC)
- Full-Power Domain (Application Processing Unit, DDR Controller, Graphics Processing Unit and High-Speed Connectivity)
- Low-Power Domain (Real-Time Processing Unit, Security and Configuration Unit, Platform Management Unit, System Monitor and General Connectivity)
- Programmable Logic (PL)

Power Distribution Dependencies

There are following dependencies how the initial 24V voltage from the main power pins on cPCI slot J1 is distributed to the onboard DC-DC converters, which power up further DC-DC converters and the particular on-board voltages:

Power Distribution

Power-On Sequence

The TEC0850 board meets the recommended criteria to power up the Xilinx Zynq UltraScale+ MPSoC properly by keeping a specific sequence of enabling the onboard DC-DC converters dedicated to the particular Power Domains and powering up the onboard voltages.

On the TEB0911 UltraRack board following Power Domains will be powered up in a certain sequence with by enable and power-good signals of the DC-DC converters, which are controlled by the System Controller FPGA U18:

1. Main Power and Programmable Logic (PL)
2. Low-Power Domain (LPD)
3. Full-Power Domain (FPD)
4. GTH, PS GTR transceiver and DDR memory
5. Optional DAC voltages

Hence, those three power instances will be powered up consecutively when the Power-Good signals of the previous instance are asserted.

Following diagram describes the sequence of enabling the three power instances utilizing the DC-DC converter control signals (Enable, Power-Good), which will power-up in descending order as listed in the blocks of the diagram.

Power-On Sequence Diagram

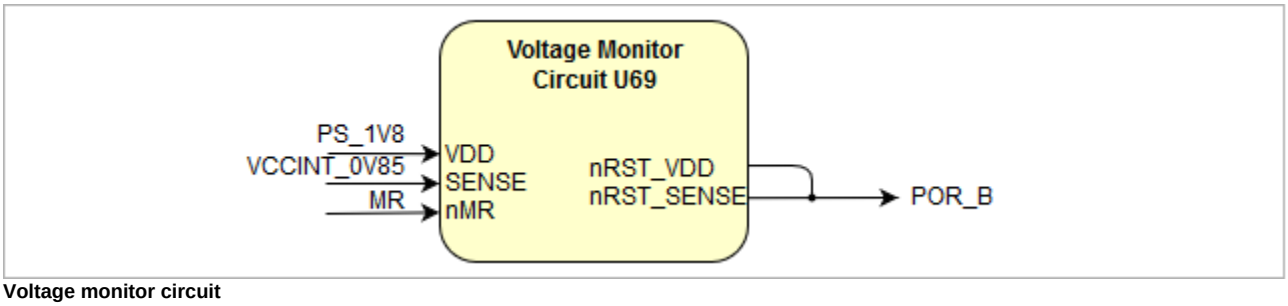
> To avoid any damage to the MPSoC module, check for stabilized onboard voltages in a steady state before powering up the MPSoC's I/O bank voltages VCCOx. All I/Os should be tri-stated during the power-on sequence.

It is important that all PS and PL I/Os are tri-stated at power-on until the "Power Good"-signals are high, meaning that all onboard voltages have become stable and the module is properly powered up.

See Xilinx datasheet DS925 for additional information.

Voltage Monitor Circuit

The voltages PS_1V8 and VCCINT_0V85 are monitored by the voltage monitor circuit U69, which generates the POR_B reset signal at power-on. A manual reset is also possible by driving the low active MR-pin connected to MAX10 FPGA U18 (bank5, pin K10) to GND.



Voltage monitor circuit

Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used /modified / copied only in accordance with the terms of such license.

Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of REACH. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no SVHC (Substances of Very High Concern) on the Candidate List are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the European Chemicals Agency (ECHA).

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
